<sup>1</sup>Funded by a grant from the National Mission on Education through ICT,  
<http://spoken-tutorial.org/NMEICT-Intro>. This Textbook Companion and Scilab  
codes written in it can be downloaded from the "Textbook Companion Project"  
section at the website <http://scilab.in>

# **Book Description**

**Title:** Switchgear Protection And Power Systems

**Author:** S. S. Rao

**Publisher:** Khanna Publisher, New Delhi

**Edition:** 13

**Year:** 2012

**ISBN:** 8174092323

Scilab numbering policy used in this document and the relation to the above book.

**Exa** Example (Solved example)

**Eqn** Equation (Particular equation of the above book)

**AP** Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

# Contents

<b>List of Scilab Codes</b>	<b>4</b>
<b>3 Fundamentals of Fault Clearing and Switching Phenomena</b>	<b>5</b>
<b>17 Electrical Substations and Equipments and Busbar Layouts</b>	<b>12</b>
<b>18 Neutral Grounding or Earthing</b>	<b>13</b>
<b>19 Introduction to Fault Calculations</b>	<b>16</b>
<b>20 Symmetric Faults and Current Limiting Reactors</b>	<b>21</b>
<b>21 Symmetric Components</b>	<b>44</b>
<b>22 Unsymmetrical Faults on Unloaded Generator</b>	<b>54</b>
<b>23 Faults On Power Systems</b>	<b>66</b>
<b>32 Protection of transformers</b>	<b>76</b>
<b>33 Protection of Generators</b>	<b>78</b>
<b>35 Current Transformers and their Applications</b>	<b>81</b>
<b>36 Voltage Transformer and their Application</b>	<b>84</b>
<b>44 Power System Stability and Auto Reclosing Schemes</b>	<b>85</b>
<b>45 Voltage Control and Compensation of Reactive Power</b>	<b>91</b>

<b>46 Economic operation of Power Systems</b>	<b>95</b>
<b>57 Power Flow Calculations</b>	<b>98</b>
<b>58 Applications of switchgear</b>	<b>107</b>

# List of Scilab Codes

Exa 3.1	To find the transient current of RL circuit . . . . .	5
Exa 3.2	to find the DC component and instantaneous value of currents and voltages . . . . .	6
Exa 3.3	To find Max Rate of restriking voltage and time for RRRV and the frequency . . . . .	7
Exa 3.4	To find the peak striking voltage and its frequency and the avg of RRRV and its max rate . . . . .	8
Exa 3.5	The average rate of rise of restriking voltage . . . . .	9
Exa 3.6	To estimate the average rate of restriking voltage . . .	9
Exa 3.7	to find the peak striking voltage and the time to reach it	10
Exa 3.8	To find the value of resistance to be used across the contact space . . . . .	11
Exa 17.1	to find the min force on the conductors . . . . .	12
Exa 18.1	To calculate the ohmic value of impedance . . . . .	13
Exa 18.2	to find the value of reactance . . . . .	13
Exa 18.3	calculate the reactance to neutralize different value of line capacitance . . . . .	14
Exa 18.4	To find the inductance and the KVA rating . . . . .	14
Exa 19.1	expressing the quantities in per unit form . . . . .	16
Exa 19.2	conversion in per unit . . . . .	17
Exa 19.3	to find the new pu reactance . . . . .	17
Exa 19.4	drawing the reactance diagram of the system . . . . .	17
Exa 19.5	to find the fault current . . . . .	18
Exa 19.6	The reactance calculations . . . . .	19
Exa 19.7	to find the pu impedances . . . . .	19
Exa 19.9	To calculate the new fault level . . . . .	20
Exa 20.1	Calculate Fault MVA and current . . . . .	21
Exa 20.2	To find the steady state fault current . . . . .	22

Exa 20.03 to find the fault MVA . . . . .	23
Exa 20.04 calculate the fault current and MVA . . . . .	24
Exa 20.05.aCalculate the Fault MVA and current . . . . .	25
Exa 20.05.bcalculating the fault current . . . . .	26
Exa 20.06 To calculate the current supplied by alternator . . . . .	27
Exa 20.07 finding the current supplied by generator . . . . .	28
Exa 20.08 to calulate the subtransient fault current and breaker current rating . . . . .	29
Exa 20.09 to calculate the fault level . . . . .	30
Exa 20.10 to calculate the max possible fault level . . . . .	30
Exa 20.11 to calculate the fault level . . . . .	31
Exa 20.12 To calculate the fault level at any point of line . . . . .	31
Exa 20.13 to find initial short circuit current and peak SC current . . . . .	32
Exa 20.14 to find the subtransient currents . . . . .	33
Exa 20.15 to find SC current and rms current and making and breaking capacity required . . . . .	33
Exa 20.16.ato find the short circuit current . . . . .	34
Exa 20.16.bto find SC current by ohmic method . . . . .	35
Exa 20.16.cTo find the new SC current . . . . .	36
Exa 20.17.aTo find the SC current of the circuit . . . . .	36
Exa 20.17.bto find the reactance of the reactor . . . . .	37
Exa 20.18.aTo calculate the reactance of the reactor to limit SC MVA . . . . .	38
Exa 20.18.bfault level at generator bus . . . . .	38
Exa 20.19 to calculate the current fed to the faults . . . . .	39
Exa 20.20.bto calculate the percentage change of reactors R . . . . .	40
Exa 20.21 calculate the MVA and current by both generator and transformer side . . . . .	40
Exa 20.22 calculate the short circuit level and normal and effective fault current . . . . .	41
Exa 20.23 calculate the SC ratio and effective SC ratio of HVDC current . . . . .	42
Exa 20.24 to calculate the fault levels on secondary sides of transformer . . . . .	43
Exa 21.01 Calculate the symmetric components of unbalanced lines . . . . .	44
Exa 21.02 to calculate the line voltages . . . . .	45
Exa 21.03 To determine the line currents . . . . .	46
Exa 21.04 to find the symmetric components of line currents . . . . .	47

Exa 21.05	to calculate the voltages of phase and line voltages . . . . .	49
Exa 21.06	to calculate the value of $I_a$ . . . . .	50
Exa 21.07	to find the line and phase voltage of phase a . . . . .	50
Exa 21.08	to find positive sequence component of fault current . . . . .	51
Exa 21.09	calculate the symmetric components of the fault . . . . .	52
Exa 21.10	to calculate the zero components of currents . . . . .	53
Exa 22.01	to calculate the sub transient currents for different types of fault . . . . .	54
Exa 22.02	To find ratio of line currents to single line to ground faults . . . . .	56
Exa 22.03	to calculate line current for single line to ground fault . . . . .	56
Exa 22.04.a	To calculate subtransient voltage between double line to ground fault . . . . .	57
Exa 22.04.b	To calculate fault current following through the neutral reactor . . . . .	59
Exa 22.05	TO find fault current and line to neutral voltages at generator terminals . . . . .	60
Exa 22.06	To calculate subtransient voltage between line to line fault . . . . .	62
Exa 22.07	ratio of line currents for line to line to three phase faults . . . . .	63
Exa 22.08	To calculate the percentage reactance and resistance . . . . .	64
Exa 22.09	To find the SC current and ratio of generator contribution . . . . .	65
Exa 23.03	To calculate the fault current . . . . .	66
Exa 23.04	To calculate the fault current . . . . .	67
Exa 23.05	To calculate the fault current . . . . .	68
Exa 23.06	to find the subtransient fault currents . . . . .	69
Exa 23.07	To calculate the fault current for different cases . . . . .	70
Exa 23.08	To calculate fault current and phase voltages . . . . .	70
Exa 23.09	To calculate fault currents for different types of faults . . . . .	72
Exa 32.01	to find the CT ratio . . . . .	76
Exa 32.02	To find the CT ratio . . . . .	76
Exa 33.01	To calculate the value of resistance to be added in the neutral to ground connection . . . . .	78
Exa 33.02	To find the percentage winding to be protected . . . . .	78
Exa 33.03	To find the percentage winding to be protected against earth fault . . . . .	79
Exa 33.05	To find the neutral earthing resistance . . . . .	80
Exa 35.01	To find the VA rating and current of CT . . . . .	81

Exa 35.02	Calculate the effective burden of the current transformer	81
Exa 35.03	To find out the flux density of core . . . . .	82
Exa 35.04	To calculate the ratio error of CT . . . . .	82
Exa 36.03	To calculate the VA of the output of voltage transformer	84
Exa 44.01	To calculate max possible power transfer through the transmission line . . . . .	85
Exa 44.02	To calculate max possible power transfer through the transmission line . . . . .	85
Exa 44.03	To calculate the steady state limit . . . . .	86
Exa 44.04.a	To determine the Inertia Constants and Angular Momentum . . . . .	86
Exa 44.04	To calculate the kinetic energy of rotor . . . . .	87
Exa 44.05	To find the stored energy and angular acceleration . .	88
Exa 44.06	To calculate the Angular momentum and acceleration of rotor . . . . .	88
Exa 44.07	To calculate the power and increase in the shaft power	89
Exa 44.08	To calculate the critical clearing angle . . . . .	89
Exa 45.B.2	To find the overall power factor of the sub station . .	91
Exa 45.B.3	Calculate the KVAr required of capacitor . . . . .	92
Exa 45.B.4	Calculate the economical pf . . . . .	92
Exa 45.B.5	Calculate the most economical pf . . . . .	93
Exa 45.B.6	Calculate the kW and power factor of substation . .	93
Exa 45.01	To find the power factor and KVA . . . . .	94
Exa 46.01	To determine the load allocation of various units . .	95
Exa 46.02	To calculate the load distribution on basis of economic loading . . . . .	96
Exa 46.03	Comparison of Economic and Equal loading . . . . .	97
Exa 57.01	To find the branch current and branch admittance . .	98
Exa 57.02	To find the admittance of the circuit . . . . .	98
Exa 57.04	To find the Voltage of the circuit . . . . .	99
Exa 57.05	To calculate power angle between source and load voltage	99
Exa 57.06	Reactive and complex power flow . . . . .	100
Exa 57.07	To calculate the pu active power flow . . . . .	100
Exa 57.08	sending end voltage and average reactive power flow .	101
Exa 57.09	To calculate the complex and real power of the system	101
Exa 57.11	Determine the voltage and phase angle at bus 2 by gauss seidal method . . . . .	102
Exa 57.12	to determine the modified bus voltage . . . . .	103

Exa 57.13	To calculate the voltage of bus 2 by NR method . . . . .	103
Exa 57.14	to calculate the power flows and line losses . . . . .	104
Exa 57.15	To find the sending end power and DC voltage . . . . .	105
Exa 57.16	to calculate the power flow of given line . . . . .	105
Exa 57.17	To calculate the power flow through the lines . . . . .	106
Exa 58.02	To find the over current factor . . . . .	107

# Chapter 3

## Fundamentals of Fault Clearing and Switching Phenomena

**Scilab code Exa 3.1** To find the transient current of RL circuit

To find the transient current of RL circuit

```
1
2 clear ;
3 close ;
4 clc ;
5 R=10;
6 L=0.1;
