<sup>1</sup>Funded by a grant from the National Mission on Education through ICT, <http://spoken-tutorial.org/NMEICT-Intro>. This Textbook Companion and Scilab codes written in it can be downloaded from the "Textbook Companion Project" section at the website <http://scilab.in>

# Book Description

**Title:** Problems In Fluid Flow

**Author:** D. J. Brasch And D. Whyman

**Publisher:** Edward Arnold

**Edition:** 1

**Year:** 1986

**ISBN:** 0-7131-3554-9

Scilab numbering policy used in this document and the relation to the above book.

**Exa** Example (Solved example)

**Eqn** Equation (Particular equation of the above book)

**AP** Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

# Contents

List of Scilab Codes	4
1 Pipe Flow of Liquids	8
2 pipe flow of gasses and gas liquid mixtures	18
3 velocity boundary layers	26
4 Flow Measurement	31
5 Flow measurement in open channel	38
6 pumping of liquids	49
7 Flow Through Packed Beds	58
8 Filtration	62
9 Forces on bodies Immersed in fluids	70
10 Sedimentation and Clssification	77
11 Fluidisation	86
12 Pneumatic Conveying	94
13 Centrifugal Separation Operations	100

# List of Scilab Codes

Exa 1.1.1	laminar turnulent pipe flow and Reynolds number . . .	8
Exa 1.1.2	conditions in pipeline while liquid passes in steady motion through it . . . . .	9
Exa 1.1.3	laminar flow and Hagen Poiseuille equation . . . . .	10
Exa 1.1.4	velocity distribution in fluid in laminar motion in pipe	11
Exa 1.1.5	comparison of laminar and turbulent flow . . . . .	11
Exa 1.1.6	power required for pumping local pressure in pipeline and the effects on both of an increase in pipe roughness	12
Exa 1.1.7	power required for pumping when pipe system contains resistances to flow . . . . .	13
Exa 1.1.8	fluid flow rate and use of friction and chart . . . . .	15
Exa 1.1.9	time taken to drain a tank . . . . .	16
Exa 1.1.10	minimum pipe diameter to obtain a given fluid flow . .	17
Exa 2.1.1	gas flow through pipe line when compressibility must be considered . . . . .	18
Exa 2.1.2	flow of ideal gas at maximum velocity under isothermal and adiabatic condition . . . . .	19
Exa 2.1.3	flow of a non ideal gas at maximum velocity under adiabatic condition . . . . .	21
Exa 2.1.4	venting of gas from pressure vessel . . . . .	23
Exa 2.1.5	gas flow measurement with veturimeter . . . . .	23
Exa 2.1.6	pressure drop required for flow of a gas liquid mixture through pipe . . . . .	24
Exa 3.1.1	streamline flow over a flat plate . . . . .	26
Exa 3.1.2	turbulent flow over a plate . . . . .	27
Exa 3.1.3	streamline and turbulent flow through and equations of universal velocity profile . . . . .	28
Exa 4.1.1	use of pitot tube to measure flow rate . . . . .	31

Exa 4.1.2	use of pitot tube to measure flow of gas . . . . .	32
Exa 4.1.3	use of orifice and manometer to measure flow . . . . .	33
Exa 4.1.4	determination of orifice size for flow measurement and pressure drop produced by orifice and venturi meters .	34
Exa 4.1.5	use of rotatometer for flow measurement . . . . .	35
Exa 4.1.6	mass of float required to measure fluid rate in rotatometer	36
Exa 5.1.1	use of manning and chezy formulae . . . . .	38
Exa 5.1.2	stream depth in trapezoid channel . . . . .	39
Exa 5.1.3	optimum base angle of a Vshaped channel Slope of a channel . . . . .	39
Exa 5.1.4	stream depth and maximum velocity and flow rate in a pipe . . . . .	40
Exa 5.1.5	flow measurement with sharp crested weir . . . . .	41
Exa 5.1.6	equation of specific energy and analysis of tranquil and shooting flow . . . . .	42
Exa 5.1.7	alternate depth of stream gradient of mild and steep slope . . . . .	43
Exa 5.1.8	critical flw condition . . . . .	44
Exa 5.1.9	flow measurement with broad crested weir . . . . .	45
Exa 5.1.10	gradually varied flow behind a weir . . . . .	45
Exa 5.1.11	analysis of hydraulic jump . . . . .	46
Exa 6.1.1	cavitation and its avoidance in suction pipes . . . . .	49
Exa 6.1.2	specific speed of a centrifugal pump . . . . .	51
Exa 6.1.3	theoretical and effective characteristic of centrifugal pump flow rate . . . . .	51
Exa 6.1.4	flow rate when cetrifugal pumps operate singly and in parallel . . . . .	53
Exa 6.1.5	pumping with a reciprocating pump . . . . .	54
Exa 6.1.6	pumping with a air lift pump . . . . .	56
Exa 7.1.1	determination of particle size and specific surface area for a sample of powder . . . . .	58
Exa 7.1.2	rate of flow through packed bed . . . . .	59
Exa 7.1.3	determination of pressure drop to drive fluid through a packed bed of raschig rings then of similar size spheres and the determination of total area of surface presented with two types of packing . . . . .	60
Exa 8.1.1	constant rate of filtration in a plate and frame filter process . . . . .	62

Exa 8.1.2	Constant rate and pressure drop filtration . . . . .	63
Exa 8.1.3	determination of characteristic of filtration system . .	64
Exa 8.1.4	constant pressure drop filtration of suspension which gives rise to a compressible filter cake . . . . .	65
Exa 8.1.5	filtration on a rotatory drum filter . . . . .	66
Exa 8.1.6	filtration of centrifugal filter . . . . .	68
Exa 9.1.1	drag forces and coefficient . . . . .	70
Exa 9.1.2	lift force and lift coefficient . . . . .	71
Exa 9.1.3	Particle diameter and terminal settling velocity . . . .	72
Exa 9.1.4	terminal settling velocity of sphere . . . . .	72
Exa 9.1.5	effect of shape on drag force . . . . .	73
Exa 9.1.6	estimation of hindered settling velocity . . . . .	74
Exa 9.1.7	acceleration of settling particle in gravitational feild .	75
Exa 10.1.1	determination of settling velocity from a single batch sedimentation . . . . .	77
Exa 10.1.2	Minimum area required for a continuous thickener . .	78
Exa 10.1.3	classification of materials on basis of settling velocities	79
Exa 10.1.4	density variation of settling suspension . . . . .	81
Exa 10.1.5	determination of particle size distribution using a sedi- mentation method . . . . .	82
Exa 10.1.6	determination of particle size distribution of a suspended solid . . . . .	83
Exa 10.1.7	decanting of homogeneous suspension to obtain particle size of a given size range . . . . .	84
Exa 11.1.1	particulate and aggregative fluidisation . . . . .	86
Exa 11.1.2	calculation of minimum flow rates . . . . .	87
Exa 11.1.3	calculation of flow rates in fluidised beds . . . . .	88
Exa 11.1.4	estimation of vessel diameters and height for fluidisation operations . . . . .	89
Exa 11.1.5	power required for pumping in fluidised beds . . . . .	90
Exa 11.1.6	wall effect in fluidised beds . . . . .	91
Exa 11.1.7	effect of particle size on the ratio of terminal velocity .	92
Exa 12.1.1	flow pattern in pneumatic conveying . . . . .	94
Exa 12.1.2	prediction of choking velocity and choking voidage in a vertical transport line . . . . .	95
Exa 12.1.3	prediction of pressure drop in horizontal pneumatic trans- port . . . . .	96

Exa 12.1.4 prediction of pressure drop in vertical pneumatic transport . . . . .	97
Exa 12.1.5 density phase flow regime for pneumatic transport . . . . .	98
Exa 13.1.1 Equations of centrifugal operations . . . . .	100
Exa 13.1.2 fluid pressure in tubular bowl centrifuge . . . . .	101
Exa 13.1.3 particle size determination of fine particles . . . . .	102
Exa 13.1.4 flow rates in continuous centrifugal sedimentation . . . . .	102
Exa 13.1.5 separation of two immiscible liquid by centrifugation . . . . .	103
Exa 13.1.6 Cyclone Separators . . . . .	104
Exa 13.1.7 efficiency of cyclone separators . . . . .	104

# Chapter 1

## Pipe Flow of Liquids

Scilab code Exa 1.1.1 laminar turbulent pipe flow and Reynolds number

```
1
2
3 //exapple 1.1
4 clc; funcprot(0);
5 // Initialization of Variable
6 //part1
7 mu=6.3/100;//viscosity
8 rho=1170;//density
9 d=.3;//diameter of pipe
10 b=0.142;//conversion factor
11 pi=3.14;
12 //calculation
13 Q=150000*b/24/3600//flow rate
14 u=Q/pi/d^2*4//flow speed
15 Re=rho*u*d/mu
16 if Re>4000 then
17     disp(Re,"the system is in turbulent motion as
18         reynolds no is greater than 4000:");
