Book Description

Title: Physics- For Students Of Science And Engineering(Part 2)

Author: D. Halliday and R. Resnick

Publisher: Toppan, Tokyo, Japan

Edition: 2

Year: 1962

ISBN: 62-15336

Scilab numbering policy used in this document and the relation to the above book.

Exa Example (Solved example)

Eqn Equation (Particular equation of the above book)

AP Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

Contents

List of Scilab Codes	5
26 CHARGE AND MATTER	8
27 THE ELECTRIC FIELD	11
28 GAUSS S LAW	14
29 ELECTRIC POTENTIAL	16
30 CAPACITORS AND DIELECTRICS	19
31 CURRENT AND RESISTANCE	22
33 THE MAGNETIC FIELD	26
34 AMPERES LAW	30
35 FARADAYS LAW	33
36 INDUCTANCE	36
37 MAGNETIC PROPERTIES OF MATTER	40
38 ELECTROMAGNETIC OSCILLATIONS	43
39 ELECTROMAGNETIC WAVES	46
40 NATURE AND PROPOGATION OF LIGHT	47

41 REFLECTION AND REFRACTION PLANE WAVES AND PLANE SURFACESREFLECTION AND REFRACTION PLANE WAVES AND PLANE SURFACES	50
42 REFLECTION AND REFRACTION SPHERICAL WAVES AND SPHERICAL SURFACES	52
43 INTERFERENCE	55
44 DIFFRACTION	57
45 GRATING AND SPECTRA	59
46 POLARIZATION	63
47 LIGHT AND QUANTUM PHYSICS	65
48 WAVES AND PROPOGATION	68

List of Scilab Codes

Exa 26.1	Magnitude of total charges in a copper penny	8
Exa 26.2	Seperation between total positive and negative charges	8
Exa 26.3	Force acting on charge q1	9
Exa 26.4	Electrical and Gravitational force between two particles	9
Exa 26.5	Repulsive force betwven two protons in a nucleus of iron	10
Exa 27.1	Electric field strength	11
Exa 27.4	The point on the line joining two charges for the electric field strength to be zero	11
Exa 27.9	Deflection of electron	12
Exa 27.11	Torque and work done by external agent on electric dipole	12
Exa 28.3	Electric field strength	14
Exa 28.4	Electric field strength at the nuclear surface	14
Exa 29.3	Magnitude of an isolated positive point charge	16
Exa 29.4	Electric potential at the surface of a gold nucleus	16
Exa 29.5	Potential at the center of the square	17
Exa 29.8	Mutual potential energy	17
Exa 29.9	Mutual potential energy	18
Exa 30.1	Plate area	19
Exa 30.5	To calculate Capacitance Free charge Electric field strength Potential diffrence between plates	19
Exa 30.6	To calculate Electric displacement and Electric polarisation in dielectric and air gap	20
Exa 31.1	Current density	22
Exa 31.2	Drift speed	23
Exa 31.3	Resistance and resistiviyy	23
Exa 31.4	Mean time and Mean free path	24
Exa 31.5	Power	24
Exa 33.1	Force acting on a proton	26

Exa 33.3	Torsional constant of the spring	26
Exa 33.4	Work done	27
Exa 33.5	Hall potential difference	27
Exa 33.6	Orbital radius Cyclotron frequency and Period of revolution	28
Exa 33.7	Magnetic induction and Deuteron energy	29
Exa 34.3	Distance	30
Exa 34.5	Magnetic field and Magnetic flux	30
Exa 34.9	Magnetic field and Magnetic dipole moment	31
Exa 35.1	Induced EMF	33
Exa 35.7	Induced electric field and EMF	34
Exa 36.1	Inductance of a toroid	36
Exa 36.2	Time	36
Exa 36.3	MAXimum Current and Energy stored	37
Exa 36.4	Rate at which energy is stored and delivered and appeared	37
Exa 36.6	Energy	38
Exa 37.2	Orbital dipole moment	40
Exa 37.4	Change in magnetic moment	40
Exa 37.5	Precession frequency	41
Exa 37.6	Magnetic field strength Magnetisation Effective magnetising current and Permeability	41
Exa 38.1	Current	43
Exa 38.2	Angular frequency	43
Exa 38.3	Angular frequency and time	44
Exa 38.5	Magnetic field	44
Exa 38.6	Calculation of current	45
Exa 39.6	Magnitude of electric and magnetic field	46
Exa 40.1	Force and energy reflected	47
Exa 40.2	Angular speed	47
Exa 40.3	Calculation of c	48
Exa 40.4	Percentage error	48
Exa 41.1	angel between two refracted beam	50
Exa 41.4	Index of glass	51
Exa 41.5	Angel	51
Exa 42.4	Location of image	52
Exa 42.5	Location of image	53
Exa 42.7	Location of image	53

Exa 42.8	Location of image	53
Exa 43.1	Angular position of first minimum	55
Exa 43.2	Linear distance	55
Exa 43.4	Refraction	56
Exa 43.5	Refraction	56
Exa 44.1	Calculation of wavelength	57
Exa 44.2	Calculation of wavelength	57
Exa 44.5	Current	58
Exa 44.7	delta y	58
Exa 45.1	calculation of angel	59
Exa 45.2	Calculation of angel theta	59
Exa 45.3	Calculation of sodium doublet	60
Exa 45.4	Calculation of dispersion	60
Exa 45.5	Calculation of angels	61
Exa 46.1	Calculation of theta	63
Exa 46.2	Angle of refraction	63
Exa 46.3	Thickness of slab	64
Exa 47.1	velocity	65
Exa 47.2	Time calculation	65
Exa 47.3	Work function for sodium	66
Exa 47.4	Kinetic energy to be imparted on recoiling electron	66
Exa 47.5	Binding energy of hydrogen atom	67
Exa 1.1	Wavelength of particle	68
Exa 48.1	velocity and angular wavelength	68
Exa 48.2	Quantized energy	69
Exa 48.3	Quantum number	69
Exa 48.5	Position of electron	70
Exa 48.6	Position of electron	70

Chapter 26

CHARGE AND MATTER

Scilab code Exa 26.1 Magnitude of total charges in a copper penny

```
1 //chapter26
2 //Example 1.1
3 clc
4 m=3.1 //mass of copper penny in grams
5 e=4.6*10^-18 //charge in coulombs
6 NO=6*10^23 //avogadro's number atoms/mole
7 M=64 //molecular weight of copper in gm/mole
8 //Calculation
9 N=(NO*m)/M; //No.of copper atoms in penny
10 q=N*e; //magnitude of the charges in coulombs
11 disp(q,"magnitude of the charges in coul is")
```

Scilab code Exa 26.2 Seperation between total positive and negative charges

```
1 //Chapter26
2 //Example 2
3 clc
4 F=4.5 //Force of attraction in nt
```

```

5 q=1.3*10^5 //total charge in coul
6 r=q*sqrt((9*10^9)/F);
7 disp(r,"Seperation between total positive and
    negative charges in meters is")

```

Scilab code Exa 26.3 Force acting on charge q1

```

1 //Chapter26
2 //example 3
3 clc
4 //given three charges q1,q2,q3
5 q1=-1.0*10^-6 //charge in coul
6 q2=+3.0*10^-6
7 q3=-2.0*10^-6
8 r12=15*10^-2 //seperation between q1 and q2 in m
9 r13=10*10^-2 //seperation between q1 and q3 in m
10 angle=%pi/6 //in degrees
11 F12=(9.0*10^9)*q1*q2/(r12^2) //in nt
12 F13=(9.0*10^9)*q1*q3/(r13^2) //in nt
13 F12x=-F12 ; //ignoring signs of charges
14 F13x=F13*sin(angle);
15 F1x=F12x+F13x
16 F12y=0 //from fig.263
17 F13y=-F13*cos(angle);
18 F1y=F12y+F13y //in nt
19 disp(F1x,"X component of resultant force acting on
    q1 in nt is")
20 disp(F1y,"Y component of resultant force acting on
    q1 in nt is")

```

Scilab code Exa 26.4 Electrical and Gravitational force between two particles

```

1 //chapter26
2 //Example 4
3 clc
4 r=5.3*10^-11 //distance b/w electron and proton in
   the hydrogen atom in meter
5 e=1.6*10^-19 //charge in coul
6 G=6.7*10^-11 //gravitatal constant in nt-m2/kg2
7 m1=9.1*10^-31 //mass of electron in kg
8 m2=1.7*10^-27 //mass of proton in kg
9 F1=(9*10^9)*e*e/(r^2) //coulombs law
10 F2=G*m1*m2/(r^2) //gravitational force
11 disp(F1,"Coulomb force in nt is")
12 disp(F2,"Gravitational force in nt is")

```

Scilab code Exa 26.5 Repulsive force betwven two protons in a nucleus of iron

```

1 //chapter 26
2 //Example 5
3 clc
4 r=4*10^-15 //separation b/w proton annd nucleus in
   iron in meters
5 q=1.6*10^-19 //charge in coul
6 F=(9*10^9)*(q^2)/(r^2); //coulombs law
7 printf("Repulsive coulomb force F=%d nt",F)

```

Chapter 27

THE ELECTRIC FIELD

Scilab code Exa 27.1 Electric field strength

```
1 //chapter27
2 //Example 1
3 clc
4 m=9.1*10^-31 //mass of electron in kg
5 g=9.8 //acceleration due to gravity in m/s
6 q=1.6*10^-19 //charge of electron in coul
7 disp("Electric field strength E=F/q where F=mg")
8 E=m*g/q
9 disp(E,"electric field strength in nt/coul is")
```

Scilab code Exa 27.4 The point on the line joining two charges for the electric field strength to be zero

```
1 //chapter27
2 //example 4
3 clc
4 //given
5 q1=1.0*10^-6 //in coul
```

```

6 q2=2.0*10^-6 //in coul
7 l=10 //separation b/w q1 and q2 in cm
8 disp("for the electric field strength to be zero the
      point should lie between the charges where E1=E2
      ")
9 //Refer to the fig 27.9"
10 //E1=electric field strength due to q1
11 //E2=electric field strength due to q2
12 disp("E1=E2 which implies  $q1/4x^2 = q2/4(1-x)^2$ 
      ")
13 x=1/(1+sqrt(q2/q1))
14 printf("Electric field strength is zero at x=%f cm",
      x)

```

Scilab code Exa 27.9 Deflection of electron

```

1 //chapter27
2 //example 9
3 clc
4 //given
5 e=1.6*10^-19 //charge in coul
6 E=1.2*10^4 //electric field in nt/coul
7 x=1.5*10^-2 //length of deflecting assembly in m
8 K0=3.2*10^-16 //kinetic energy of electron in joule
9 //calculation
10 y=e*E*x^2/(4*K0)
11 disp(y,"Corresponding deflection in meters is")

```

Scilab code Exa 27.11 Torque and work done by external agent on electric dipole

```

1 //chapter 27
2 //Example 11

```

```

3  clc
4  //Given
5  q=1.0*10^-6 //magnitude of two opposite charges of a
      electric dipole in coul
6  d=2.0*10^-2 // seperation b/w charges in m
7  E=1.0*10^5 //external field in nt/coul
8  //calculations
9  //(a)Max torque if found when theta=90 degrees
10 //Torque =pEsin(theta)
11 p=q*d //electric dipole moment
12 T=p*E*sin(%pi/2)
13 disp("(a)Maximum torque exerted by the fied in nt-m
      is")
14 disp(T)
15 //(b)work done by the external agent is the
      potential energy b/w the positions theta=180 and
      0 degree
16 W=(-p*E*cos(%pi))-(-p*E*cos(0))
17 disp("(b) work done by the external agent to turn
      dipole end for end in joule is ")
18 disp(W)

```

Chapter 28

GAUSS S LAW

Scilab code Exa 28.3 Electric field strength

```
1 //chapter 28
2 //Example 3
3 clc
4 //Given
5 r=1*10^-10 //radius of the atom in meter
6 Z=79 //gold atomic number
7 e=1.6*10^-19 //charge in coul
8 q=Z*e //total positive charge in coul
9 E=(9.0*10^9)*q/r^2
10 disp(E,"Electric field strength at the surface of
    the gold atom in nt/coul is")
```

Scilab code Exa 28.4 Electric field strength at the nuclear surface

```
1 //chapter 28
2 //Example 4
3 clc
4 //given
```

```
5 r=6.9*10^-15 //radius of the gold nucleus in meter
6 Z=79 //gold atomic number
7 e=1.6*10^-19 //charge in coul
8 q=Z*e //total positive charge in coul
9 E=(9.0*10^9)*q/r^2
10 disp("Electric field strength at the surface of the
      gold atom in nt/coul is")
11 disp(E)
```

Chapter 29

ELECTRIC POTENTIAL

Scilab code Exa 29.3 Magnitude of an isolated positive point charge

```
1 //chapter 29
2 //example 3
3 clc
4 //given
5 V=100 //electric potential in volts
6 r=10*10^-2 //in meters
7 epsilon0=8.85*10^-12 //coul2/nt-m2
8 disp("Potential due to a point charge is  $V=q/4*\pi*$ 
      epislon0*r")
9 q=V*4*%pi*epsilon0*r
10 disp(q,"Magnitude of positive point charge in coul
      is ")
```

Scilab code Exa 29.4 Electric potential at the surface of a gold nucleus

```
1 //chapter 29
2 //example 4
3 clc
```

```

4 //given
5 r=6.6*10^-15 //radius of the gold nucleus in meter
6 Z=79 //gold atomic number
7 e=1.6*10^-19 //charge in coul
8 q=Z*e //total positive charge in coul
9 epsilon0=8.85*10^-12 //coul2/nt-m2
10 V=q/(4*pi*epsilon0*r)
11 disp(V,"Electric potential at the surface of the
    nucleus in volts is")

```

Scilab code Exa 29.5 Potential at the center of the square

```

1 //chapter 29
2 //example 5
3 clc
4 //given
5 q1=1.0*10^-8 //in coul
6 q2=-2.0*10^-8 //in coul
7 q3=3.0*10^-8 //in coul
8 q4=2.0*10^-8 //in coul
9 a=1 //side of square in meter
10 epsilon0=8.85*10^-12 //coul2/nt-m2
11 //refer to the fig 29.7
12 r=a/sqrt(2) //distance of charges from centre in
    meter
13 V=(q1+q2+q3+q4)/(4*pi*epsilon0*r)
14 disp(V,"Potential at the center of the square in
    volts is")

```

Scilab code Exa 29.8 Mutual potential energy

```

1 //chapter 29
2 //example 8

```

```

3  clc
4  //given
5  q1=1.6*10^-19 //charge in coul
