# Book Description

**Title:** Concise Physics

**Author:** H. Matyaka

**Publisher:** Edward Arnold, Britian

**Edition:** 1

**Year:** 1987

**ISBN:** 0-7131-3593-X

Scilab numbering policy used in this document and the relation to the above book.

**Exa** Example (Solved example)

**Eqn** Equation (Particular equation of the above book)

**AP** Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

# Contents

List of Scilab Codes	4
1 Basics	9
2 Mechanics	12
3 Waves	27
4 Waves	31
5 Light	35
6 Heat	39
7 Electricity	46
8 Magnetism and ac theory	51
9 The Atom	60
10 Physical Optics	67
11 Semiconductors	72

# List of Scilab Codes

Exa 1.1	Neutral temperature . . . . .	9
Exa 2.1	acceleration and distance . . . . .	12
Exa 2.2	acceleration and distance . . . . .	12
Exa 2.3	time to reach aircraft . . . . .	13
Exa 2.4	resultant force . . . . .	13
Exa 2.5	car and wind . . . . .	14
Exa 2.7	velocity of speedboat . . . . .	14
Exa 2.8	tension on string . . . . .	15
Exa 2.10	resultant force . . . . .	15
Exa 2.11	components of velocity . . . . .	16
Exa 2.12	components of force . . . . .	16
Exa 2.13	inelastic collision . . . . .	17
Exa 2.14	Inelastic collision . . . . .	17
Exa 2.15	angularvelocity and centripetal force . . . . .	18
Exa 2.16	tension in arm . . . . .	18
Exa 2.17	inclination and reaction . . . . .	19
Exa 2.18	planet mean density . . . . .	19
Exa 2.19	orbit radius and linearvelocity . . . . .	20
Exa 2.20	mass of galaxy . . . . .	20
Exa 2.21	total kinetic energy . . . . .	20
Exa 2.22	time taken to move . . . . .	21
Exa 2.23	angular velocity ratio . . . . .	21
Exa 2.25	attributes of shm . . . . .	22
Exa 2.26	simple harmonic motion . . . . .	22
Exa 2.27	attrbutes simple pendulum . . . . .	23
Exa 2.28	maximum displacement shm . . . . .	23
Exa 2.29	maximum potential energy shm . . . . .	24
Exa 2.30	extension of steel wire . . . . .	24

Exa 2.31	Youngs modulus . . . . .	25
Exa 2.32	wire length change . . . . .	25
Exa 3.1	refraction and incidence angle . . . . .	27
Exa 3.2	critical angle . . . . .	27
Exa 3.3	wavespeed in medium . . . . .	28
Exa 3.4	frequency for antinode . . . . .	28
Exa 3.5	wave frequency speed . . . . .	29
Exa 3.6	wave attributes . . . . .	29
Exa 4.1	amplitude and pressure change . . . . .	31
Exa 4.3	length of tube . . . . .	31
Exa 4.4	frequency of beats . . . . .	32
Exa 4.5	fundamental frequency . . . . .	32
Exa 4.6	doppler effect . . . . .	33
Exa 4.7	apparent frequency change . . . . .	33
Exa 5.1	minimum deviation . . . . .	35
Exa 5.2	incidence and prism angle . . . . .	35
Exa 5.3	position and nature of image . . . . .	36
Exa 5.4	position of image . . . . .	36
Exa 5.5	position and nature of image . . . . .	37
Exa 5.6	lens values . . . . .	38
Exa 6.1	heat given out . . . . .	39
Exa 6.2	potential difference heater . . . . .	39
Exa 6.3	heat loss and specific heat . . . . .	40
Exa 6.4	Boyles law . . . . .	40
Exa 6.5	Charles law . . . . .	41
Exa 6.6	pressure law . . . . .	41
Exa 6.7	KE and rms velocity . . . . .	42
Exa 6.8	ideal gas equation . . . . .	42
Exa 6.9	Boyles law . . . . .	43
Exa 6.10	gas external work . . . . .	43
Exa 6.12	platinum resistance theromoeter . . . . .	44
Exa 6.14	length at temperature . . . . .	44
Exa 6.15	heat transfer rate . . . . .	44
Exa 6.16	temperature gradient . . . . .	45
Exa 7.1	Electric potential strength . . . . .	46
Exa 7.2	ratio of force . . . . .	46
Exa 7.3	emf and internal resistance . . . . .	47
Exa 7.4	power output . . . . .	47

Exa 7.5	percent of pd . . . . .	48
Exa 7.6	final resistance calculation . . . . .	49
Exa 7.7	internal resistance calculation . . . . .	49
Exa 7.8	calculation of resistance . . . . .	49
Exa 8.1	force on field . . . . .	51
Exa 8.2	flux density . . . . .	51
Exa 8.4	permeability of free space . . . . .	52
Exa 8.5	faraday law . . . . .	52
Exa 8.6	moment of couple . . . . .	53
Exa 8.7	maximum emf power . . . . .	53
Exa 8.8	pd across motor . . . . .	54
Exa 8.9	transformer equation . . . . .	54
Exa 8.10	power loss ratio . . . . .	55
Exa 8.11	secondary power output . . . . .	55
Exa 8.12	charge produced . . . . .	56
Exa 8.13	relative permittivity . . . . .	56
Exa 8.14	charge in capacitors . . . . .	57
Exa 8.15	rms and peak voltage . . . . .	57
Exa 8.16	Qmax and rms current . . . . .	58
Exa 8.17	capacitance of C . . . . .	58
Exa 8.18	rate of change of pd . . . . .	59
Exa 8.19	determine resistance and capacitance . . . . .	59
Exa 9.1	electric field effect . . . . .	60
Exa 9.2	Millikan experiment . . . . .	61
Exa 9.3	Stephan Boltzmann law . . . . .	61
Exa 9.4	working temperature . . . . .	62
Exa 9.5	stephan law . . . . .	62
Exa 9.6	increased temperature effect . . . . .	62
Exa 9.7	plancks theory . . . . .	63
Exa 9.8	quantities of metal . . . . .	64
Exa 9.9	decay law . . . . .	64
Exa 9.10	count rate determination . . . . .	65
Exa 9.11	determination of attributes . . . . .	65
Exa 9.12	velocity selection . . . . .	66
Exa 10.1	plancks theory . . . . .	67
Exa 10.2	wavelength and prism angle . . . . .	67
Exa 10.3	thin film interference . . . . .	68
Exa 10.4	fringe width determination . . . . .	68

Exa 10.5	increasing thickness effect . . . . .	69
Exa 10.6	wavelength and angular displacement . . . . .	69
Exa 10.7	wavelength and diffraction angle . . . . .	70
Exa 10.8	telescope angular magnification . . . . .	71
Exa 11.1	rms current and peak pd . . . . .	72
Exa 11.2	common emitter transistor . . . . .	72
Exa 11.3	common base transistor . . . . .	73
Exa 11.4	common emitter amplifier . . . . .	73

# List of Figures

1.1	Neutral temperature	10
1.2	Neutral temperature	11

# Chapter 1

## Basics

Scilab code Exa 1.1 Neutral temperature

```
1  clc
2  clear
3  //input
4  x=(0:50:550)//temperature difference in x axis
5  y
    =[0,0.43,0.79,1.10,1.36,1.54,1.69,1.77,1.80,1.78,1.70,1.54]
    //emf in y axis
6  //calculation
7  title("a graph of E vs teta")//setting title for
    graph
8  xlabel("temperature difference teta")//setting x
    label
9  ylabel("emf E")//setting y label
10 plot(x,y)//plotting the graph
11 printf("from the grapgh it can be determined that
    neutral temperature is 400deg C")
12 x=(50:50:550)//temperature difference in x axis
13 y=[8.6,7.9,7.3,6.8,6.2,5.6,5.1,4.5,4.0,3.4,2.8] //E/
    theta in y axis
14 plot(x,y,"+")//plotting the graph
15 title("a graph of E/teta vs teta")//set title
```

Figure 1.1: Neutral temperature

```

16 xlabel("temperature difference teta")//set x label
17 ylabel(" E/teta")//set y label
18 legend("E Vs Theta","E/theta Vs theta")
19 b=-(4.5*10^-6)/400//gradient of graph is b
20 a=4.5*10^-6-(b*400)//finding the intercept on y axis
    by substuting the points(400,4.5) in line
    equation
21 printf("\n the value of b is %3.3e VdegC^-2",b)
22 printf("\n the value of a is %3.3e VdegC^-1",a)

```

---

Figure 1.2: Neutral temperature

# Chapter 2

## Mechanics

Scilab code Exa 2.1 acceleration and distance

```
1  clc
2  clear
3  //input from given graph
4  //calculation of initial acceleration
5  ia=18/4
6  // calculation of final acceleration
7  fa=-18/10
8  decel=-(fa)//calculation of deceleration
9  //calculation of total distance covered
10 d=0.5*(4*18)+(8*18)+0.5*(10*18)//area under velocity
    time graph
11 //output
12 printf("\n the initial acceleration is %3.3f m/s^2",
    ia)
13 printf("\n the final acceleration is %3.3f m/s^2",
    decel)
14 printf("\n the distance covered is is %3.3f m",d)
```

---

Scilab code Exa 2.2 acceleration and distance

```

1  clc
2  clear
3  //input
4  v=0 //car stops => final velocity=0
5  u=29 //initial velocity
6  t=11 //time
7  //calculation of acceleration
8  a=(v-u)/t//eqn of uniformly accelerated body
9  //calculating distance travelled during this period
10 d=(v+u)*t*0.5//eqn of uniformly accelerated body
11 //output
12 printf("the accleration is %3.3f ms-2 ",a)
13 printf("\nthe distance travelled is %3.3f m",d)

```

---

**Scilab code Exa 2.3** time to reach aircraft

```

1  clc
2  clear
3  //input
4  v=120 //velocity
5  a=75 //accleration
6  //calculation of time
7  t=2*v/(a*cosd(45))//eqn of uniformly accelerated
   body
8  //output
9  printf("the time taken is %3.3f s",t)

```

---

**Scilab code Exa 2.4** resultant force

```

1  clc
2  clear
3  //input
4  f1=50

```

```

5 f2=50
6 //calculation of net force
7 f=f1+f2 // the two forces act in same direction
8 //output
9 printf("the resultant force is %3.3f N",f)

```

---

### Scilab code Exa 2.5 car and wind

```

1 clc
2 clear
3 //input
4 vc=25 //velocity of car
5 va=10 //velocity of wind
6 va1=15 //velocity of wind westward
7 //calculation
8 v1=vc+va//resultant velocity for a tail of wind
9 v2=vc-va//when wind blows westward at 10 m/s^
    resultant velocity
10 v3=vc-va1//resultant velocity when wind blows
    westward at 15m/s^2
11 //output
12 printf("1. the resultant velocity of wind is %3.3f
    ms^-1 eastwards ",v1)
13 printf("\n2. the resultant velocity of wind is %3.3f
    ms^-1 westwards ",v2)
14 printf("\n3. the resultant velocity of wind is %3.3f
    ms^-1westwards ",v3)

```

---

### Scilab code Exa 2.7 velocity of speedboat

```

1 clc
2 clear
3 //input

```

```

4 v=30 //velocity of speedboat
5 vw=40 //velocity of wind
6 //calculation
7 x=(30/40)//angle between original velocity of boat
   and resultant velocity
8 y=atand(x)//applying trigonometry
9 b=90+y//bearing of boat
10 //output
11 printf("the bearing of speedboat is %3.3f deg",b)

```

---

**Scilab code Exa 2.8** tension on string

```

1 clc
2 clear
3 //input
4 f1=6 //tension on string AB
5 f2=6 //tension on string BC
6 //calculation of tension
7 t=2*f1*sind(55)// the resultant tension is the
   diagonal of rhombus formed
8 //output
9 printf("/n the resultant tension is %3.3f N",t)

```

---

**Scilab code Exa 2.10** resultant force

```

1 clc
2 clear
3 //input magnitude of forces
4 f1=40
5 f2=50
6 //calculation
7 d=50^2+40^2+2*50*40*cosd(50)//finding the diagonal

```

```

8 r=50^2+40^2+2*50*(40)*cosd(130)//reversing the side
   and finding diagonalprintf("the resultant is %3.3f
   ",d1)
9 r1=sqrt(r)//resultant sum
10 d1=sqrt(d)// resultant when smaller force is
   subtracted from larger
11 //output
12 printf("1. the resultant sum is %3.3f N",d1)
13 printf("\n 2. the resultant when smaller force is
   subtracted from larger is %3.3f N",r1)

```

---

**Scilab code Exa 2.11** components of velocity

```

1 clc
2 clear
3 //input
4 v=380//velocity
5 //calculation
6 vh=v*cosd(60)//horizontal component
7 vv=v*sind(60)//vertical component
8 //output
9 printf("the horizontal component is %3.3f ms-1",vh)
10 printf("\nthe vertical component is %3.3f ms-1",vv)

```

---

**Scilab code Exa 2.12** components of force

```

1 clc
2 clear
3 //input
4 fc=50//force applied by magnet
5 x=90-20 //angle of force
6 //calculation
7 fb=fc*sind(70)//force due to b

```

```

8 fa=fc*cosd(70)//force due to a
9 //output
10 printf("the force due to b is %3.3f N",fb)
11 printf("\nthe force due to b is %3.3f N",fa)

```

---

#### Scilab code Exa 2.13 inelastic collision

```

1 clc
2 clear
3 //input
4 m1=1
5 v1=25
6 m2=2
7 v2=0
8 //calculation
9 v=(m1*v1)+(m2*v2)//applying princilpe of
  conservation of linear momentum
10 v4=v/(m1+m2)
11 //output
12 printf("the velocity with which both will move is %3
  .3f ms-1",v4)

```

---

#### Scilab code Exa 2.14 Inelastic collision

```

1 clc
2 clear
3 //input
4 m1=1//mass of object 1
5 v1=25//velocity of object 1
6 m2=2//mass of object 2
7 v2=0//body at rest ,velocity =0
8 v3=10
9 //caclulation

```

```

10 u=((m1*v1)+(m2*v2)-(m2*v3))/2//applying princilpe of
    conservation of linear momentum
11 //output
12 printf("\n the value of u is %3.3f ms-1",-u)

```

---

**Scilab code Exa 2.15** angularvelocity and centripetal force

```

1 clc
2 clear
3 //input
4 m=2//mass
5 r=4//radius
6 v=6//uniform speed
7 //calculation
8 w=v/r//angular velocity
9 f=m*r*w*w//centripetal force
10 //output
11 printf("the angular velocity is %3.3f rads-1",w)
12 printf("\n the centripetal force is %3.3f N",f)

```

---

**Scilab code Exa 2.16** tension in arm

```

1 clc
2 clear
3 //input
4 m=140//mass
5 v=8//speed
6 r=5//radius
7 g=9.8//acceleration due to gravity
8 //calculation
9 t=((m*v2/5)2)+(140*9.8)2 //applying parallelogram
    of vectors
10 t1=sqrt(t)

```

```
11 //output
12 printf("the tension in arm is %3.3f N",t1)
```

---

#### Scilab code Exa 2.17 inclination and reaction

```
1 clc
2 clear
3 //input
4 v=15//velocity
5 m=70//mass
6 r=50//radius
7 //calculation
8 x=v*v/(r*10)//applying parallelogram of vectors ,then
   for equilibrium
9 y=atand(x)
10 r1=(m*10)/cosd(y)
11 //output
12 printf("the inclination is %3.3f deg",y)
13 printf("\n the reaction is %3.3f N",r1)
```

---

#### Scilab code Exa 2.18 planet mean density

```
1 clc
2 clear
3 //input
4 r=5500//radius
5 g1=6.7*10^-11
6 g=7//acceleration due to gravity
7 //calculation of mean density
8 p=3*g/(4*pi*r*10^3*g1)//mean density
9 //output
10 printf("the mean density of planet is %3.3f kgm^-3",
   p)
```

---

**Scilab code Exa 2.19** orbit radius and linearvelocity

```
1 clc
2 clear
3 //input
4 m=5*10^24//mass of earth
5 g1=6.7*10^-11
6 //calculation
7 r=((6.7*10^-11*5*10^24*(3600*24)^2)/(4*pi^2))^(1/3)
   //orbit radius
8 v=(2*pi*r)/(3600*24)//linear velocity
9 //output
10 printf("the orbit radius is %3.3f",r)
11 printf("\n the linear velocity is %3.3f ms^-1",v)
```

---

**Scilab code Exa 2.20** mass of galaxy

```
1 clc
2 clear
3 //input
4 v=3*10^5//orbit speed
5 r=4.6*10^20//distance
6 g1=6.7*10^-11
7 //calculation of mass
8 m=v*v*r/g1 //Newtons law
9 //output
10 printf("the mass is %2.3e kg",m)
```

---

**Scilab code Exa 2.21** total kinetic energy

```

1  clc
2  clear
3  //input
4  v=0.6//speed
5  m=0.3//mass
6  //calculation
7  e=0.75*m*v*v//total kinetic energy is kinetic energy
   +moment of inertia
8  //output
9  printf("the total kinetic energy is %3.3f J",e)

```

---

**Scilab code Exa 2.22** time taken to move

```

1  clc
2  clear
3  //input
4  t1=34
5  u=0//starts from rest
6  x=3//distance to move
7  //calculation
8  t=(3*3/(10*sind(t1)))^0.5//from law of conservation
   of energy
9  //output
10 printf("the time taken is %3.3f s",t)

```

---

**Scilab code Exa 2.23** angular velocity ratio

```

1  clc
2  clear
3  //input
4  i1=53//inertia when it spins with panels carrying
   solar cells
5  i2=37//inertia about axis of rotation

```

```

6 //calculation
7 r=i1/i2//law of conservation of angular momentum
8 //output
9 printf("the ratio of angular velocities is %3.3f",r)

```

---

Scilab code Exa 2.25 attributes of shm

```

1 clc
2 clear
3 //input
4 f=9//frequency
5 x=0//at midpoint of stroke x=0
6 //calculation
7 t=1/f
8 a=-4*pi^2*f^2*x//acceleration for shm
9 v=2*pi*f*0.05//velocity for shm
10 a1=-4*pi^2*9^2*0.05//acceleration at amplitude
11 v1=0//velocity at amplitude is 0
12 //output
13 printf("the period of oscillation is %3.3f s^-1",t)
14 printf("\n the velocity at midpoint of stroke is %3.3f ms^-1",v)
15 printf("\n the acceleration at midpoint of stroke is %3.3f ms^-2",a)
16
17 printf("\n the velocity at amplitude is %3.3f ms^-1",v1)
18 printf("\n the acceleration at amplitude is %3.3f ms^-2",a1)

```

---

Scilab code Exa 2.26 simple harmonic motion

```

1 clc

```

```

2 clear
3 //input
4 g=10
5 t=0.3//period of shm
6 //calculation
7 x=g*t^2/(4*pi^2)//for shm maximum amplitude
8 //output
9 printf("the maximum amplitude for bead to be in
    contact is %3.3f m",x)

```

---

**Scilab code Exa 2.27** attributes simple pendulum

```

1 clc
2 clear
3 //input
4 p1=2.3//period of pendulum
5 p2=3.1//period when pendulum is lengthened
6 //calculation
7 g=4*pi^2/(p2^2-p1^2)//acceleration of free fall
8 l=p1^2*g/(4*pi^2)//length of pendulum
9 //output
10 printf("the acceleration of free fall is %3.3f m/s^2
    ",g)
11 printf("\n the length of pendulum is %3.3f m",l)

```

---

**Scilab code Exa 2.28** maximum displacement shm

```

1 clc
2 clear
3 //INPUT DATA
4 f=55 //frequency
5 a=7*10^-3 //amplitude
6

```

```

7
8 //calculation
9 a=(-2*%pi*f)^2*a
10
11 //output
12 printf("the acceleration of the body when it is at
    its maximum displacement from its zero position
    is -%3.1f ms^-2",a)

```

---

**Scilab code Exa 2.29** maximum potential energy shm

```

1 clc
2 clear
3 //input
4 f=55//frequency
5 amp=7*10^-3//amplitude
6 m=1.2//mass
7 //calculation
8 e=0.5*m*4*%pi^2*f^2*amp^2//maximum pe occurs at zero
    position
9 //output
10 printf("the maximum pe is %3.3 f J",e)

```

---

**Scilab code Exa 2.30** extension of steel wire

```

1 clc
2 clear
3 //input
4 l=6.5//length
5 m=0.06//mass of wire
6 m1=10//mass attached
7 g=9.8//acceleration due to gravity
8 e=2.1*10^11//youngs modulus

```

```

9 ro=8*10^3//density of steel
10 //calculation
11 e1=m1*g*ro*l*1/(e*m)//extension caused
12 pe=0.5*g*m1*e1//potential energy
