Book Description

Title: Concepts of Physics (Volume - 1)

Author: H. C. Verma

Publisher: Bharati Bhavan, india

Edition: 2

Year: 2011

ISBN: 9788177091878

Scilab numbering policy used in this document and the relation to the above book.

Exa Example (Solved example)

Eqn Equation (Particular equation of the above book)

AP Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

Contents

List of Scilab Codes	4
2 Physics and Mathematics	5
3 Rest and Motion Kinematics	23
4 The Forces	45
5 Newton s Laws of Motion	47
6 Friction	52
7 Circular Motion	61
8 Work and Energy	71
9 Centre of Mass Linear momentum Collision	78
10 Rotational Mechanics	88
11 Gravitation	100
12 Simple Harmonic Motion	113
13 Fluid Mechanics	128

14 Some Mechanical Properties of Matter	139
15 Wave Motion and Waves on a String	158
16 Sound Waves	174
17 Light Waves	197
18 Geometrical Optics	210
19 Optical Instruments	240
20 Dispersion and Spectra	251
22 Photometry	256

List of Scilab Codes

Exa 2.1w	calculation of magnitude and direction of vector	5
Exa 2.2	calculation of sum of vectors and difference of the vectors	6
Exa 2.2w	calculation of resultant of three vectors	6
Exa 2.3	calculation of component of force in vertical direction	8
Exa 2.3w	calculation of resultant of the vectors	8
Exa 2.4	calculation of work done by the force during displacement	9
Exa 2.4w	calculation of direction of resultant vector	10
Exa 2.5	calculation of angle between two vectors from known value of their cross product	11
Exa 2.6	calculation of the slope of curve at a given point	11
Exa 2.6w	calculation of angle	12
Exa 2.7w	calculation of unit vector	13
Exa 2.9	evaluation of a integral	13
Exa 2.9w	calculation of angle between two vectors	14
Exa 2.10	calculation of round off value upto three digits	15
Exa 2.10w	calculation of value of the given scalar	16
Exa 2.11	calculation of value	17
Exa 2.11w	calculation of change in volume of sphere as radius is changed	17
Exa 2.12	calculation of value	18
Exa 2.13	calculation of average focal length of concave mirror considering uncertainty	19

Exa 2.13w	calculation of maximum and minimum value of a given function	20
Exa 2.14w	calculation of the area under curve	20
Exa 2.18w	calculation of value	21
Exa 3.1	calculation of distance and displacement	23
Exa 3.1w	calculation of average speed of the walk	23
Exa 3.2	calculation of average speed and instantaneous speed	24
Exa 3.2w	calculation of average speed and average velocity	25
Exa 3.3	calculation of distance from speed versus time graph	26
Exa 3.3w	calculation of average velocity and average acceleration	26
Exa 3.4	calculation of average velocity of the tip of minute hand in a table clock	28
Exa 3.4w	calculation of distance travelled displacement and acceleration	28
Exa 3.5	calculation of distance travelled in given time time taken to reach a particular velocity and distance covered to reach particular velocity	29
Exa 3.5w	calculation of acceleration and distance travelled	30
Exa 3.6	calculation of displacement of particle in last 1 second	31
Exa 3.6w	calculation of acceleration	32
Exa 3.7	calculation of maximum height reached by the ball	32
Exa 3.8	calculation of velocity and position of the particle	33
Exa 3.8w	calculation of total distance and number of trips	34
Exa 3.9	calculation of horizontal range of the projectile	35
Exa 3.9w	drawing graph of x versus t v versus t and a versus t	35
Exa 3.10	calculation of velocity of the swimmer with respect to ground	37

Exa 3.10w	calculation of height of balloon when stone reaches ground	37
Exa 3.11	calculation of velocity of the raindrops with respect to the man	39
Exa 3.11w	calculation of time of flight horizontal range and vertical range	39
Exa 3.16w	calculation of angle of the swim and time to cross the river	40
Exa 3.17w	calculation of time taken and position of the arrival on opposite bank	41
Exa 3.18w	calculation of speed of raindrops with respect to road and the moving man	42
Exa 3.19w	calculation of speed and direction of rain with respect to the road	43
Exa 4.1	calculation of coulomb force	45
Exa 4.3w	calculation of ratio of the electrical force to the gravitational force between two electrons	46
Exa 5.1	calculation of force exerted by the string on a particle	47
Exa 5.3w	calculation of the force exerted by the tree limb on the bullet	48
Exa 5.4w	calculation of the position of a particle	48
Exa 5.7w	calculation of acceleration with which ring starts moving if released from rest at an angle θ	49
Exa 5.8w	calculation of the maximum acceleration of the man for safe climbing	50
Exa 6.1	calculation of the angle made by the contact force with the vertical and the magnitude of contact force	52
Exa 6.1w	calculation of the maximum angle to prevent slipping	53
Exa 6.2	calculation of the force of friction exerted by the horizontal surface on the box	53
Exa 6.2w	calculation of frictional force and minimum value of coefficient of static friction	54
Exa 6.3	calculation of the force of friction exerted by the horse and condition of boy for sliding back	55

Exa 6.3w	calculation of the maximum value of mass of the block	55
Exa 6.4	calculation of coefficient of static friction and kinetic friction between the block and the plank	56
Exa 6.5w	calculation of the coefficient of kinetic friction	57
Exa 6.6w	calculation of the values of coefficient of static and kinetic friction	58
Exa 6.10w	calculation of minimum and maximum values of mass and the acceleration if given a gentle push	59
Exa 7.1	calculation of the angular velocity	61
Exa 7.1w	calculation of the maximum speed the car can take on the turn without skidding	61
Exa 7.2	calculation of the angular acceleration	62
Exa 7.2w	calculation of the value of angle of banking	63
Exa 7.3	calculation of the magnitude of linear acceleration	64
Exa 7.4	calculation of the value of radial and tangential acceleration	64
Exa 7.4w	calculation of the value of elongation of the spring	65
Exa 7.5	calculation of the normal contact force by the side wall of the groove	66
Exa 7.6	calculation of the speed of vehicle on the turn	66
Exa 7.7	calculation of the weight of the body if spring balance is shifted to the equator	67
Exa 7.7w	calculation of the value of force exerted by the air on the plane	68
Exa 7.8w	calculation of the angular speed of rotation	68
Exa 7.10w	calculation of the minimum speed at which floor may be removed	69
Exa 8.1	calculation of the work done by the spring force	71
Exa 8.1w	calculation of the work done by the porter on the suitcase	71
Exa 8.2	calculation of the work done by force of gravity	72
Exa 8.2w	calculation of the value of minimum horsepower of the motor to be used	73

Exa 8.3w	calculation of the power delivered by the pulling force and average power	73
Exa 8.4w	calculation of the work done by the given force	74
Exa 8.5	calculation of the speed of the pendulum of bob when it makes an angle of 60 degree with the vertical	75
Exa 8.11w	calculation of the speed of the particle at a given point	76
Exa 8.12w	calculation of the maximum compression of the spring	76
Exa 9.1w	Locating the centre of maass of the system .	78
Exa 9.4	calculation of the maximum compression of the string	79
Exa 9.5	calculation of the speed of combined mass .	79
Exa 9.6w	calculation of the acceleration of the centre of mass	80
Exa 9.8w	calculation of the distance from launching point	81
Exa 9.9w	calculation of the distance moved by the bigger block	82
Exa 9.10w	calculation of the average force exerted by the hero on the machine gun	83
Exa 9.11w	calculation of the fractional change in kinetic energy	83
Exa 9.13w	calculation of the final velocity of the shuttle	84
Exa 9.14w	calculation of the velocity with which the board recoils	85
Exa 9.17w	calculation of the speed of the bullet	85
Exa 9.22w	calculation of the loss of kinetic energy due to the collision	86
Exa 10.1	calculation of the number of revolutions made	88
Exa 10.1w	calculation of the number of revolutions made by the wheel	89
Exa 10.2	calculation of the time taken by the fan to attain half of the maximum speed	89
Exa 10.2w	calculation of the angle rotated during the next second	90
Exa 10.3	calculation of the angular velocity and angular acceleration of the pulley	91

Exa 10.3w	calculation of the torque required to stop the wheel in one minute	91
Exa 10.4w	calculation of the angular velocity of the wheel	92
Exa 10.5	calculation of the moment of inertia of the wheel	93
Exa 10.7w	calculation of the position of second kid on a balanced seesaw	93
Exa 10.8w	calculation of the normal force and the frictional force that the floor exerts on the ladder	94
Exa 10.9w	calculation of the contact force exerted by the floor on each leg of ladder	95
Exa 10.12	calculation of the kinetic energy of the sphere	96
Exa 10.13w	calculation of the kinetic energy and angular momentum of the disc	96
Exa 10.14w	calculation of the work done by the torque in first two seconds	97
Exa 10.19w	calculation of the moment of inertia of the system about the axis perpendicular to the rod passing through its middle point	98
Exa 10.22w	calculation of the number of revolutions made by the wheel per second	99
Exa 11.1	calculation of the initial acceleration of the particles	100
Exa 11.2	calculation of the work done in bringing three particles together	101
Exa 11.2w	calculation of the distance from the earth surface where resultant gravitational field due to the earth and the moon is zero	101
Exa 11.4	calculation of the gravitational field	102
Exa 11.4w	calculation of the separation between the particles under mutual attraction	103
Exa 11.5w	calculation of the work done by an external agent	104
Exa 11.7	calculation of the gravitational field due to the moon at its surface	105
Exa 11.8	calculation of the value of acceleration due to gravity	105

Exa 11.9	calculation of the speed and time period of the satellite	106
Exa 11.9w	calculation of the maximum height attained by the particle	107
Exa 11.10	calculation of the escape velocity from the moon	108
Exa 11.10w	calculation of the stretch produced in the spring	108
Exa 11.11w	calculation of time period of the pendulum if used at the equator	109
Exa 11.12w	calculation of the speed of projection of the satellite into an orbit	110
Exa 11.13w	calculation of the speed and the angular speed of the satellite S2 relative to the satellite S1	111
Exa 12.1	calculation of the spring constant	113
Exa 12.1w	calculation of the amplitude time period maximum speed and velocity at time t	113
Exa 12.2	calculation of the amplitude of the motion .	114
Exa 12.2w	calculation of the maximum force exerted by the spring on the block	115
Exa 12.3	calculation of the time period of oscillation of the particle	115
Exa 12.3w	calculation of the maximum time period maximum speed maximum acceleration speed for a given displacement speed at a given time .	116
Exa 12.4	calculation of the value of phase constant . .	117
Exa 12.5	calculation of the total mechanical energy of the system	118
Exa 12.6	writing the equation giving angular displacement as a function of time	118
Exa 12.6w	calculation of the maximum speed of the block and the speed when the spring is stretched	119
Exa 12.7	calculation of the time period of a pendulum	120
Exa 12.8	calculation of the value of the acceleration due to gravity	121
Exa 12.9	calculation of the time period of oscillation .	121
Exa 12.10	calculation of the value of torsional constant of the wire	122

Exa 12.11	calculation of the amplitude of the simple harmonic motion	123
Exa 12.14w	calculation of the time period linear amplitude speed and angular acceleration	123
Exa 12.16w	calculation of the time period of small oscillations	124
Exa 12.18w	calculation of the time period of small oscillation about the point of suspension	125
Exa 12.19w	calculation of the moment of inertia of the second disc about the wire	126
Exa 12.22w	calculation of the phase difference between the individual motions	127
Exa 13.1	calculation of the force exerted by the water on the bottom	128
Exa 13.1w	calculation of the force exerted by the mercury on the bottom of the beaker	129
Exa 13.2	calculation of the volume of the cube outside the water	129
Exa 13.2w	calculation of the height of the atmosphere to exert the same pressure as at the surface of the earth	130
Exa 13.3	calculation of the speed of the outgoing liquid	131
Exa 13.3w	calculation of the height of the water column	131
Exa 13.4	calculation of the difference in the pressures at A and B point	132
Exa 13.5	calculation of the speed of the water coming out of the tap	133
Exa 13.5w	calculation of the force applied on the water in the thicker arm	133
Exa 13.6w	calculation of the elongation of the spring .	134
Exa 13.7w	calculation of the maximum weight that can be put on the block without wetting it	135
Exa 13.8w	calculation of the angle that the plank makes with the vertical in equilibrium	135
Exa 13.10w	calculation of the rate of water flow through the tube	136
Exa 13.11w	calculation of the velocity of the water coming out of the opening	137

Exa 14.1	calculation of the tensile stress developed in the wire	139
Exa 14.1w	calculation of the extension of the wire . . .	140
Exa 14.2	calculation of the value of Young modulus .	140
Exa 14.2w	calculation of the elongation of the rope and corresponding change in the diameter	141
Exa 14.3	calculation of the elastic potential energy stored in the stretched steel wire	142
Exa 14.3w	calculation of the minimum radius of the wire used if it is not to break	142
Exa 14.4	calculation of the force by which the surface on one side of the diameter pulls the surface on the other side	143
Exa 14.4w	calculation of the ratio of the lengths of the two wire	144
Exa 14.5	calculation of the gain in the surface energy	145
Exa 14.5w	calculation of the decrease in the volume of the sample of water	145
Exa 14.6	calculation of the excess pressure inside a mercury drop	146
Exa 14.6w	calculation of the longitudinal strain in two wires	147
Exa 14.7	calculation of the density of the liquid . . .	147
Exa 14.7w	calculation of the longitudinal strain developed in each wire	148
Exa 14.8	calculation of the height of the water in the column	149
Exa 14.8w	calculation of the elastic potential energy stored in the wire	150
Exa 14.9	calculation of the value of the coefficient of viscosity of the solution	151
Exa 14.9w	calculation of the elongation of the wire . .	151
Exa 14.11w	calculation of the amount by which the pressure inside the bubble is greater than the atmospheric pressure	152
Exa 14.12w	calculation of the load W suspended from wire to keep it in equilibrium	153
Exa 14.13w	calculation of the radius of the capillary tube	154

Exa 14.15w	calculation of the tangential force needed to keep the plate moving	154
Exa 14.16w	calculation of the shearing stress between the horizontal layers of water	155
Exa 14.17w	calculation of the terminal velocity of the rain drop	156
Exa 15.1	calculation of the velocity function v giving displacement function g_x giving shape . . .	158
Exa 15.1w	calculation of the amplitude wavelength frequency speed of the wave	159
Exa 15.2	calculation of the amplitude wave number wavelength frequency time period wave velocity .	160
Exa 15.2w	calculation of the maximum velocity and acceleration of the particle	160
Exa 15.3	calculation of the time taken by the pulse in travelling through a distance	161
Exa 15.3w	calculation of the speed and displacement of the particle	162
Exa 15.4	calculation of the power transmitted through a given point	163
Exa 15.4w	calculation of the extension of the wire over its natural length	164
Exa 15.5	calculation of the phase difference between the waves and amplitude of the resultant wave	165
Exa 15.5w	calculation of the wavelength of the pulse when it reaches the top of the rope	165
Exa 15.6	calculation of the velocity node closest to origin antinode closest to origin amplitude at x	166
Exa 15.6w	calculation of the displacement of the particle	167
Exa 15.7	calculation of the fundamental frequency of the portion of the string between the wall and the pulley	168
Exa 15.7w	calculation of the maximum displacement wavelengths and wave speed velocity nodes and antinodes number of loops	169
Exa 15.8	calculation of the length of the experimental wire to get the resonance	170

Exa 15.8w	calculation of the pressing in the guitar to produce required fundamental frequency . . .	171
Exa 15.9w	calculation of the position of bridges in sonometer wire	171
Exa 15.10w	calculation of the length of the wire	172
Exa 16.1	calculation of the audibility of a wave	174
Exa 16.1w	calculation of the depth of the sea and wavelength of the signal in the water	175
Exa 16.2	calculation of the amplitude of vibration of the particles of the medium	175
Exa 16.2w	calculation of the location of the plane	176
Exa 16.3	calculation of the intensity of the sound wave	177
Exa 16.3w	calculation of the frequency wavelength speed maximum and minimum pressures of the sound wave	177
Exa 16.4	calculation of the increase in the sound level in decibels	178
Exa 16.4w	calculation of the minimum separation between the two points for a given phase difference	179
Exa 16.5	calculation of the nature of interference	179
Exa 16.5w	calculation of the atmospheric temperature	180
Exa 16.6	calculation of the distance of the piston from the open end for tube to vibrate in its first overtone	181
Exa 16.6w	calculation of the speed of sound wave in hydrogen	181
Exa 16.7	calculation of the tuning frequency of fork B	182
Exa 16.7w	calculation of the energy delivered to the microphone	183
Exa 16.8	calculation of the most dominant frequency	183
Exa 16.8w	calculation of the amplitude of vibration of the particles of the air	184
Exa 16.9w	calculation of the factor by which the pressure amplitude increases	185
Exa 16.10w	calculation of the frequency at which the maxima of intensity are detected	185

Exa 16.11w	calculation of the minimum distance between the source and the detector for maximum sound detection	186
Exa 16.12w	calculation of the length of the shortest closed organ pipe that will resonate with the tuning fork	187
Exa 16.13w	calculation of the length of the closed pipe .	188
Exa 16.14w	calculation of the speed of the sound in air .	188
Exa 16.15w	calculation of the fundamental frequency if the air is replaced by hydrogen	189
Exa 16.16w	calculation of the speed wavelength in the rod frequency wavelength in the air	190
Exa 16.17w	calculation of the frequency of the note emitted by the taut string	191
Exa 16.18w	calculation of the apparent frequency	191
Exa 16.19w	calculation of the frequency of the whistle of the train	192
Exa 16.20w	calculation of the main frequency heard by the person	193
Exa 16.21w	calculation of the original frequency of the source	193
Exa 16.22w	calculation of the speed of the car	194
Exa 16.23w	calculation of the frequency of train whistle heard by the person standing on the road perpendicular to the track	195
Exa 17.1	calculation of the speed of light in glass . . .	197
Exa 17.1w	calculation of the limits of wavelengths in the water	197
Exa 17.2	calculation of the separation between successive bright fringes	198
Exa 17.2w	calculation of the refractive index of the glass	199
Exa 17.3	calculation of the wavelength of light in the water	199
Exa 17.3w	calculation of the wavelengths of the violet and the red lightcalculation of the wavelengths of the violet and the red light	200
Exa 17.4	calculation of the minimum thickness of the film	201

Exa 17.4w	calculation of the separation between the slits	201
Exa 17.5	calculation of the angular divergence for most of the light getting diffracted	202
Exa 17.5w	calculation of the ratio of maximum intensity to the minimum intensity in the interference fringe pattern	203
Exa 17.6	calculation of the diameter of the disc image	203
Exa 17.6w	calculation of the ratio of maximum intensity to the minimum intensity in the interference pattern	204
Exa 17.7w	calculation of the maximum and the minimum path difference at the detector	205
Exa 17.8w	calculation of the distance of bright fringe from the central maximum	206
Exa 17.9w	calculation of the number of fringes that will shift due to introduction of the sheet	207
Exa 17.10w	calculation of the wavelengths in the visible region that are strongly reflected	207
Exa 17.11w	calculation of the distance between the two first order minima	208
Exa 18.1	calculation of position of the image of an object placed at a distance from the mirror	210
Exa 18.1w	calculation of position and nature of the image of an object placed at a distance from a concave mirror	211
Exa 18.2	calculation of length of the image of an object placed at a distance from a concave mirror	211
Exa 18.2w	calculation of length of the image of an object placed horizontal at a distance from the mirror	212
Exa 18.3	calculation of shift in the position of printed letters by a glass cube	213
Exa 18.3w	calculation of object distance for half image height as compared to original height in case of reflection by convex mirror	213
Exa 18.4	calculation of refractive index of material from known critical angle	214
Exa 18.4w	calculation of image distance and focal length of concave mirror	215

Exa 18.5	calculation of refractive index of material from known value of angle of minimum deviation by prism	216
Exa 18.5w	calculation of maximum angle of reflection for a surface	216
Exa 18.6	calculation of position of the image of an object placed at a distance from spherical convex surface	217
Exa 18.6aw	calculation of minimum refractive index for parallel emergence for given condition in right prism	218
Exa 18.6bw	verification of total internal reflection for given conditions of right prism	218
Exa 18.7	calculation of the size of the image of an object placed at a distance from the spherical concave surface	219
Exa 18.8	calculation of focal length of a biconvex lens from known value of radii of curvature of refracting surfaces	220
Exa 18.9	calculation of size of the image of an object placed at a distance from a convex lens . . .	221
Exa 18.11w	locating image of a dust particle on the surface of water filled in a concave mirror as observed from top	222
Exa 18.12w	calculation of position of final image formed due to a system of glass slab and a concave mirror	223
Exa 18.13w	calculation angle of minimum deviation for equilateral prism of silicate flint glass from known value of wavelength	223
Exa 18.14w	calculation of angle of rotation of the mirror in given setup	224
Exa 18.15w	calculation of location of the image of an object placed at a distance from the spherical convex surface	225
Exa 18.16w	calculation of height of the image of an object placed along axis at a distance from a horizontal cylindrical glass rod	226

Exa 18.17w	calculation of apparent depth of a air bubble inside a glass sphere	227
Exa 18.18w	calculation of position of image due to refraction at the first surface and position of final image	228
Exa 18.19w	calculation of focal length of thin lens	229
Exa 18.20w	calculation of position of diverging mirror to obtain real image at the source itself for given system	230
Exa 18.21w	calculation of separation between mirror and the lens for parallel emergence of the final beam	230
Exa 18.22w	calculation of object distance from the lens with one side silvered	232
Exa 18.23w	calculation of location of image of an object placed in front of a concavo convex lens made of glass	233
Exa 18.24w	calculation of new focal length of a lens on immersing in water	234
Exa 18.25w	calculation of location of final image for an object on the axis of a cylindrical tube containing water closed by an equiconvex lens	235
Exa 18.26w	calculation of new position of the slide of projector if the position of the screen is changed	236
Exa 18.27w	calculation of position of the object to get a focused image	237
Exa 18.28aw	finding the image of a distant object formed by combination of two convex lens by using thin lens formula	237
Exa 18.28bw	finding the image of a distant object formed by combination of two convex lens by using equivalent lens method	238
Exa 19.1	determining which boy appears taller	240
Exa 19.1w	calculation of the angular magnification	241
Exa 19.2	calculation of the angular magnification and the length of the microscope tube	241

Exa 19.2w	calculation of the object distance to obtain maximum angular magnification for a normal eye	242
Exa 19.3	calculation of the power of lens for the spectacles	243
Exa 19.3w	calculation of the position of the image linear magnification and the angular magnification	243
Exa 19.4w	calculation of the object distance and the angular magnification	244
Exa 19.5w	calculation of the object distance and the angular magnification for the least strain in the eyes	245
Exa 19.6w	calculation of the length of the tube and the angular magnification produced by the telescope	246
Exa 19.7w	calculation of the tube length magnifying power and angular magnification	246
Exa 19.8w	calculation of the angular magnification due to the converging lens	247
Exa 19.9w	calculation of the power of lens and maximum distance that can be seen clearly	248
Exa 19.10w	calculation of the near point and the distance of the retina from the lens	249
Exa 20.1	calculation of the dispersive power of the flint glass	251
Exa 20.1w	calculation of the angular dispersion produced by a thin prism of the flint glass	252
Exa 20.2	calculation of the dispersive power of the material of the lens	252
Exa 20.2w	calculation of the angle of flint glass prism and angular dispersion produced by the combination	253
Exa 20.3w	calculation of the refracting angles of the two prisms	254
Exa 22.1	calculation of the luminous flux	256
Exa 22.1w	calculation of the total radiant flux total luminous flux and the luminous efficiency	256

Exa 22.2w	calculation of the total luminous flux emitted by the source and the total luminous intensity of the source	257
Exa 22.3w	calculation of the luminous flux falling on a plane	258
Exa 22.4w	calculation of the illuminance at a small surface area of the table top	259
Exa 22.5w	calculation of the luminous flux emitted into a cone of given solid angle	260
