Book Description

Title: Fiber Optics and Optoelectronics

Author: R. P. Khare

Publisher: Oxford Press, New Delhi

Edition: 8

Year: 2009

ISBN: 0-19-566930-4

Scilab numbering policy used in this document and the relation to the above book.

Exa Example (Solved example)

Eqn Equation (Particular equation of the above book)

AP Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

Contents

List of Scilab Codes	4
2 Ray propagation in optical fibers	7
3 Wave propagation in planar waveguides	12
4 Wave propagation in cylindrical waveguides	16
5 Single mode fibers	20
6 Optical fiber cables and connections	24
7 Optoelectronic Sources	28
8 Optoelectronic Detectors	34
9 Optoelectronic Modulators	41
10 Optical amplifiers	45
11 Wavelength division multiplexing	48
12 Fiber optic communication system	51
13 Fiber optic sensors	56
14 Laser based systems	59

List of Scilab Codes

Exa 2.1	NA angles and pulse broadning	7
Exa 2.2	number of reflections	8
Exa 2.3	pulse broadning	8
Exa 2.4	pulse broadning	9
Exa 2.5	pulse broadning	10
Exa 3.1	range of propagation constants and maximum number of modes	12
Exa 3.2	thickness	13
Exa 3.3	number of TE modes and propagation parameters . .	13
Exa 3.4	G factor	15
Exa 4.1	normalised frequency propagation constants and phase velocity	16
Exa 4.2	frational power propagation	17
Exa 4.3	normalised frequency parameters and number of modes	17
Exa 4.4	diameter	18
Exa 4.5	wavelength and diameter	18
Exa 5.1	w and wp	20
Exa 5.2	difference between propogation constant and modal bire- fringence	21
Exa 5.3	waveguide dispersion parameter	21
Exa 5.4	diameter of core and total dispersion	22
Exa 5.5	splice loss	23
Exa 6.1	refractive index	24
Exa 6.2	loss	24
Exa 6.3	insertion loss at joint	25
Exa 6.4	insertion loss at joint	26
Exa 6.5	insertion loss at joint in the forward and backward di- rection	27

Exa 7.1	intrinsic carrier density	28
Exa 7.2	diffusion potential	29
Exa 7.3	injection efficiency	29
Exa 7.4	internal and quantum efficiency	30
Exa 7.5	number of longitudinal modes	30
Exa 7.6	The reduction and Differential quantum efficiency . . .	31
Exa 7.7	Internal and external power efficiency	32
Exa 8.1	wavelength and optical power and	34
Exa 8.2	quantum efficiency maximum possible band gap energy and photocurrent	35
Exa 8.3	quantum efficiency and responsivity	36
Exa 8.4	multiplication factor	36
Exa 8.5	incident rate of photon	37
Exa 8.6	gain and photocurrent	37
Exa 8.7	rms value of shot noise current dark current and thermal noise current and signal to noise ratio	38
Exa 9.1	thickness	41
Exa 9.2	thickness	41
Exa 9.3	change in refractive index and v_{pi}	42
Exa 9.4	phase difference additional phase difference and V_{pi} .	43
Exa 9.5	angle and relative intensity	44
Exa 10.1	refractive index and spectral bandwidth	45
Exa 10.2	small signal gain and maximum possible achievable gain	46
Exa 10.3	output signal power and overall gain	46
Exa 11.1	interaction length	48
Exa 11.2	position of the output ports	48
Exa 11.4	order	49
Exa 12.1	maximum possible link length and total rise time . . .	51
Exa 12.2	link length and bandwidth	52
Exa 12.3	number of subscribers	53
Exa 12.4	total power	53
Exa 12.5	SBS threshold power	54
Exa 13.1	plot the graph	56
Exa 13.2	phase change per unit length	57
Exa 13.3	phase shift	58
Exa 14.1	energy and threshold electrical energy	59
Exa 14.3	maximum power emerging	60
Exa 14.4	pulse width and spatial length	61

Exa 14.5	time difference	61
----------	---------------------------	----

Chapter 2

Ray propagation in optical fibers

Scilab code Exa 2.1 NA angles and pulse broadning

```
1 //Example 2.1 // NA ,angles and pulse broadning
2 clc;
3 clear;
4 close;
5 format('v',9 )
6 disp(" part (a)")
7 n1=1.5;//core refrative index
8 n2=1.48;//claddin refractive index
9 a=100/2;//radius in micro meter
10 na=1;//air refrative index
11 NA=sqrt(n1^2-n2^2);//numerical aperture
12 disp(NA,"numerical aperture is")
13 disp(" part (b)")
14 am=(asind(NA));//
15 tm=asind(NA/n1);//
16 tc=asind(n2/n1);//
17 disp(am,"angle in degree is ( m)")
18 disp(tm,"angle in degree is (Om)")
19 disp(tc,"angle in degree is( c)")
```

```

20 disp(" part (c)")
21 c=3*10^8; //speed of light in m/s
22 dtl=((n1/n2)*(n1-n2)/c); //pulse broadning per unit
    length
23 disp(dtl," pulse broadning per unit length in sm-1")

```

Scilab code Exa 2.2 number of reflections

```

1 //Example 2.2 // minimum and maximum number of
    reflections
2 clc;
3 clear;
4 close;
5 format('v',5)
6 n1=1.5; //core refrative index
7 n2=1.48; //claddin refractive index
