Book Description

Title: Elements Of Electrical Science

Author: P. Mukhopadhyay, A. K. Pant, D. S. Chitore And V. Kumar

Publisher: Nem Chand & Bros, Roorkee

Edition: 2

Year: 1997

ISBN: 81-85240-65-5

Scilab numbering policy used in this document and the relation to the above book.

Exa Example (Solved example)

Eqn Equation (Particular equation of the above book)

AP Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

Contents

List of Scilab Codes

Chapter 2

ELECTRIC CIRCUITS

Scilab code Exa 2.1 current

```
// Example 2.1 :current
clc;
close;
clear;
format('v',7)
// given :
//15*I1-5*I2=10 loop 1 equation
//20*I2-5*I1-5*I3=0 loop 2 equation
//10*I3-5*I2=0 loop 3 equation
vs=10;//voltage in volts
R1=10;//resistance in ohm
R2=5;//resistance in ohm
R3=10;//resistance in ohm
R4=5;//resistance in ohm
R5=4;//resistance in ohm
Ra=1;//resistance in ohm
A=[R1+R2 R2-R1 0;R2-R1 R2+R3+R4 -R4;R4-(R5+Ra) -R4
   R4+R5+Ra];//making equations
nb=7;//number of branches
nn=5;//number of nodes
nl=nb-(nn-1);//number of loops
```

```
nvs=1;//number of voltage sources
nivs=nn-1-nvs;//number of independent voltage variables
B=[vs;0;0];//making equations
X=A\B;//solving equations
I3=X(3,1);//calculating currrent
disp(I3,"current in resistance Ra=1.0 ohm is ,(A)=")
//directions of the current are 2 to 3 and 3 to 4 respectively
```

Scilab code Exa 2.2 current

```
// Example 2.2 :current
clc;
close;
clear;
// given :
vs1=72;//voltage in volts
vs2=40;//voltage in volts
R1=36;//resistance in ohm
R2=10;//resistance in ohm
ig=2;//current in amperes
Rx=8;//resistance in ohm
//(va-72)/36+(va-40)/10 -2 +va/8=0 node equation at 1
va=((R2*Rx*vs1)+(R1*Rx*vs2)+(R1*R2*Rx*ig))/((R2*Rx)+(R1*Rx)+(R1*R2));//voltage in volts
ix1=va/Rx;//current in amperes
//(R1+R2)*I1-R2*I2+vs2=vs1 loop equation 1
//R2*I2-R2*I1+Ix*Rx=vs2 loop equation 2
//Ix=I2+2
A=[R1+R2 -R2;-R2 R2+Rx];//making equations
B=[vs1-vs2;vs2-2*Rx];//making equations
X=A\B;//solving equations
ix2=X(2,1)+ig;//current in amperes
```

```
disp(ix1,"current through Rx is(by node voltage
   method), (A)=")
disp(ix2,"current through Rx is (by loop current
   method),(A) =")
```

Scilab code Exa 2.3 current

```
// Example 2.3 :current
clc;
close;
clear;
format('v',7)
// given :
vs1=10;//voltage in volts
i5=2;//current in amperes
i2=i5;//current
r1=1;//resistance in ohms
r2=5;//resistance in ohms
r3=5;//resistance in ohms
rl=10;//resistance in ohms
r4=5;//resistance ohms
//(r1+r2+r3)*i1-r2*i2-r3*i3=vs1 loop equaion 1
//-r2*i1 -(r1+r2)*i2+(rl+r2+r3)*i3=0 loop equation 2
A=[4*(r1+r2+r3) -r2*4;-r2 (rl+r2+r3)];//making
   equations
B=[4*(vs1+r2*i2) ; i2*(r2+r3)];//making equations
X=A\B;//solving equations
il=i2-X(2,1);//calculating current
disp(il,"current through Rl is (from b to a),(A)=")
```

Scilab code Exa 2.4 current

```
// Example 2.4 :current
```

```
clc;
close;
clear;
format('v',7)
// given :
vs1=72;//voltage in volts
vs2=40;//voltage in volts
R1=36;//resistance in ohms
R2=10;//resistance in ohms
ig=2;//current in amperes
Rx=8;//resistance in ohms
disp("Applying Thevenins Theorem ")
//(vs1-voc)/R1+(v40-voc)/R2 +2 =0 node equation at 1

    ")
disp("(b) Applying Nortons Theorem ")
Isc=((vs1)/(R1+(R1*R3)/(R1+R3)))*(R1/(R1+R3));//
req=((R1*R2)/(R1+R2))+R3;//resistance in ohms
disp(Isc,"Norton short circuit current is,(A)=")
disp(t=req,"Norton equivalent resistance is,(Ohm)=")
```

Scilab code Exa 2.6 current

```
// Example 2.6 :current
clc;
close;
format('v',7)
clear;
// given :
vs1=10;//voltage volts
r1=100;//resistance in ohms
r2=600;//resistance in ohms
r3=150;//resistance in ohms
r4=850;//resistance in ohms
rx=50;//resistance in ohms
voc=vs1*((r3/(r1+r3))-(r4/(r2+r4)));//open circuit
    voltage in volts
req=((r1*r3)/(r1+r3))+((r2*r4)/(r2+r4));//equivalent
     resistance in ohms
ix=voc/(req+rx)*10^3;//current in amperes
disp(ix,"current through Rx is (from A to B),(mA)=")
```

Scilab code Exa 2.7 Nortoan Euivalent Components

```
// Example 2.7 :Norton's Equivalent
clc;
close;
clear;
// given :
vs1=40;//volts
vs2=20;//volts
r1=2;//resistance in ohms
r2=6;//resistance in ohms
r3=2;//resistance in ohms
r4=2;//resistance in ohms
iab=((r1*vs1)/(r2+(r1/2))*((r1+(r3/2))/(r1+r3)));//
    current in amperes
iab1=-vs2/r1;//current amperes
it=iab+iab1;//current amperes

Chapter 7

ELECTROTHERMAL ENERGY CONVERSION

Scilab code Exa 7.1 length and width

```
//Example  7.1// width and length
clc;
clear;
close;
format('v',6)
vph=400;//phase voltage in volts
n=3;//number of phase
kw=36;//power in kW
r=((vph^2)/(n*((kw*10^3)/n)));//resistance in ohms
p=1.016*10^-6;//resitivity
t=0.3;//thickness in mm
x=(((r*t*10^-3)/(p)));//variable
t1=1000;//initial temperature in degree celsius
t1k=273+t1;//initial temperature in kelvin
t2=650;//final temperature in degree celsius
t2k=273+t2;//final temperature in kelvin
h=((3*10^4)*((t1k/1000)^4-(t2k/1000)^4));//W/m^2
y=((kw*10^3)/(3*2*h));//variable
l=sqrt(x*y);//length in meter
```

```
w=y/l;//width in meter
disp(l,"length is ,(m)=")
disp(w*10^3,"width is ,(mm)=")
```

Scilab code Exa 7.2 power required

```
//Example 7.2// power required
clc;
clear;
close;
format('v',6)
l=0.2;//length in meter
w=0.1;//width in meter
th=25;//thickness in mm
vw=l*w*th*10^-3;//volume in m^3
ww=600;//weight of wood in kg/m^3
ww1=vw*ww;//weight of wood kg
shw=1500;//specific heat of wood in J/kg/degree celsius
t=200;//temperature in degree celsius
rg=t*shw*ww1;//energy in joules
h=(rg/(3.6*10^3));//Wh
t=15;//time in minutes
pr=h*(60/t);//power required in Watt
disp(pr,"power required is ,(W)=")
```

Scilab code Exa 7.3 voltage and current

```
//Example 7.3// voltage and current
clc;
clear;
close;
l=0.2;//length meter
```

```
w=0.1;//width in meter
th=25;//thickness in mm
vw=l*w*th*10^-3;//volume of wood in m^3
ww=600;//weight of wood in kg/m^3
ww1=vw*ww;//weight of wood kg
shw=1500;//specific heat of wood  in J/kg/degree celsius
t=200;//temperature in degree celsius
rg=t*shw*ww1;//energy in joules
h=(rg/(3.6*10^3));//Wh
t=15;//time in minutes
pr=h*(60/t);//power required in Watt
eo=8.854*10^-12;//permittivity constant
er=5;//permittivity of wood
c=((eo*er*l*w)/(th*10^-3));//capacitance in Farads
f=50;//frequency in MHz
pf=0.5;//power factor
ph=acosd(pf);//phase angle degree
v=sqrt((pr)/(c*2*%pi*f*10^6*0.05));//voltage in volts
disp(round(v),"voltage is ,(V)=")
ic=v*2*%pi*f*10^6*c;//current in amperes
disp(ic,"current is ,(A)=")
```
