Book Description

Title: Introduction to Electrical Engineering

Author: Er. J. P. Navani and Er. S. Sapra

Publisher: S. Chand & Company, New Delhi

Edition: 1

Year: 2013

ISBN: 81-219-9759-3

Scilab numbering policy used in this document and the relation to the above book.

Exa Example (Solved example)

Eqn Equation (Particular equation of the above book)

AP Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

Contents

List of Scilab Codes

Chapter 1

D C Circuit Analysis

Scilab code Exa 1.1 Current in each element

```
// Exa 1.1
clc;
clear;
close;
format('v',5)
// Given data
R1=4;// in ohm
R2= 6;// in ohm
R3= 2;// in ohm
V1= 24;// in V
V2= 12;// in V
// Applying KVL in Mesh ABEFA, V1 = (R1+R3)*I1 - R3*
    I2     (i)
// Applying KVL in Mesh BCDEB, V2 = R3*I1 - (R2+R3)*
    I2    (ii)
A= [(R1+R3) R3;-R3 -(R2+R3)];// assumed
B= [V1 V2];// assumed
I= B*A^-1;// Solving equations by matrix
    multiplication
I1= I(1);// in A
I2= I(2);// in A
```

```
disp(I1,"The current through 4 ohm resistor in A is");
// current through 2 ohm resistor
I= I1-I2;// in A
disp(I,"The current through 2 ohm resistor in A is");
disp(I2,"The current through 6 ohm resistor in A is");
disp("That is "+string(abs(I2))+" A current flows in 6 ohm resistor from C to B")
```

Scilab code Exa 1.2 Current in each branch

```
// Exa 1.2
clc;
clear;
close;
format('v',5)
// Given data
V = 100;// in V
I3= 10;// in A
R1 = 10;// in ohm
R2 = 5;// in ohm
// I1 = (V - V_A)/R1
// I2 = (V_A-0)/R2
// Using KCL at note A, I1-I2+I3=0 or
V_A= (R1*R2)/(R1+R2)*(I3+V/R1);// in V
I1 = (V - V_A)/R1;// in A
I2 = (V_A-0)/R2;// in A
disp(I1,"The current through 10 ohm resistor in A is");
disp(I2,"The current through 5 ohm resistor in A is");
disp(I3,"The current through 20 ohm resistor in A is");
```

Scilab code Exa 1.3 Voltage source to current source

```
// Exa 1.3
clc;
clear;
close;
format('v',5)
// Given data
// Part (a)
V = 30;// in V
R = 6;// in ohm
I = V/R;// the equivalent current in A
disp(I,"The equivalent current in A is");
// Part (b)
I = 10;// in A
R = 5;// in ohm
V = I*R;// the equivalent voltage in V
disp(V,"The equivalent voltage in V is");
```

Scilab code Exa 1.4 Value of current

```
// Exa 1.4
clc;
clear;
close;
format('v',7)
// Given data
R1= 6;// in ohm
R2= 2;// in ohm
R3= 5;// in ohm
I2= 4;// in A
```

```
V=24;//in V
// Applying KVL to the loop ABCDA, -R1*I1-R3*I+V=0
   (i)
// but I1= I+I2 , so from eq(i)
I= (V-R1*I2)/(R1+R3);// in A
disp(I,"The current in A is");
```

Scilab code Exa 1.5 Value of I1 and I2

```
// Exa 1.5
clc;
clear;
close;
format('v',7)
// Given data
R1= 40;// in ohm
R2= 20;// in ohm
R3= 25;// in ohm
R4= 60;// in ohm
R5= 50;// in ohm
V1= 120;// in V
V2= 60;// in V
V3= 40;// in V
// Applying KVL in Mesh ABEFA, we get  -I1*(R1+R2+R3
   )+I2*R3=V2-V1          (i)
// Applying KVL in Mesh BCEDB, we get  R3*I1-I2*(R3+
   R4+R5)= V3-V2          (ii)
A= [-(R1+R2+R3) R3; R3 -(R3+R4+R5)];
B= [V2-V1 V3-V2];
I= B*A^-1;//Solving eq(i) and (ii) by Matrix method
I1= I(1);// in A
I2= I(2);// in A
disp(I1,"The value of I1 in A is : ");
disp(I2,"The value of I2 in A is : ");
```

Scilab code Exa 1.6 Current through each battery and load current

```
// Exa 1.6
clc;
clear;
close;
format('v',6)
// Given data
R1= 2;// in ohm
R2= 4;// in ohm
R3= 6;// in ohm
V1= 4;// in V
V2= 44;// in V
//Applying KVL in ABEFA : -R1*I1 + R2*I2 = V1
    (i)
//Applying KVL in BCDEB: R3*I1 + I2*(R2+R3)=V2 (ii)
A= [-R1 R3; R2 (R2+R3)]; // assumed
B= [V1 V2];// assumed
I= B*A^-1;// Solving eq(i) and (ii) by Matrix method
I1= I(1);// in A
I2= I(2);// in A
