Book Description

Title: Manufacturing Processes For Engineering Materials

Author: S. Kalpakjian And S. R. Schmid

Publisher: Pearson Education

Edition: 5

Year: 2007

ISBN: 9788131705667

Scilab numbering policy used in this document and the relation to the above book.

Exa Example (Solved example)

Eqn Equation (Particular equation of the above book)

AP Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

Contents

List of Scilab Codes 4

2 Fundamentals of the Mechanical Behavior of Materials 6

4 Surface Tribology Dimensional Characteristics Inspection and Product Quality Assurance 10

5 Metal Casting Processes and Equipment Heat Treatment 12

6 Bulk deformation Processes 15

7 Sheet Metal Forming processes 19

8 Material Removal Processes Cutting 24

9 Material Removal Processes Abrasive Chemical Electrical and High Energy Beams 29

10 Properties and Processing of Polymers and Reinforced Plastics Rapid prototyping and Rapid Tooling 33

11 Properties and Processing of Metal Powders Ceramics Glasses and Superconductors 39

12 Joining and Fastening Processes 44

List of Scilab Codes

Exa 2.1	Calculation of ultimate tensile strength	6
Exa 2.3	Calculation of modulus resilience from hardness	7
Exa 2.4	Elimination of stress by tension	7
Exa 2.5	Yielding of a thin walled shell	8
Exa 2.8	Temperature rise in simple deformation	8
Exa 4.1	Determination of coefficient of friction	10
Exa 4.2	Adhesive wear in sliding	11
Exa 5.1	Determining the amount of phases in carbon steel . . .	12
Exa 5.2	Design and analysis of sprue for casting	13
Exa 5.3	Solidification time for various solid shapes	14
Exa 6.1	Calculation of upsetting force	15
Exa 6.4	Power required for rolling	16
Exa 6.6	Force in hot extrusion	16
Exa 6.7	Power required for rolling	17
Exa 7.1	Calculation of maximum punch force	19
Exa 7.3	Estimating springback	19
Exa 7.4	Work done in stretch forming	20
Exa 7.5	Peak pressure in explosive forming	21
Exa 7.7	Estimating the limiting drawing ratio	21
Exa 7.8	Theoretical limiting drawing ratio	22
Exa 7.9	Estimating cup diameter and earing	22
Exa 7.10	Estimating diameter of expansion	23
Exa 8.1	Relative energies in cutting	24
Exa 8.2	Comparison of forming and machining energy	25
Exa 8.3	Increase in tool life by reducing the cutting speed . . .	26
Exa 8.4	Material removal rate and cutting force in turning . .	26
Exa 8.6	Calculation of material removal rate power required and cutting time in face milling	27

Exa 9.1	Chip dimensions in grinding	29
Exa 9.2	Forces in surface grinding	30
Exa 9.5	Machining time in electrochemical machining vs drilling	30
Exa 9.6	Machining time in electrical discharge machining vs drilling	31
Exa 10.1	Degree of polymerization in polyvinyl chloride	33
Exa 10.2	Lowering the viscosity of a polymer	34
Exa 10.3	Stress relaxation in a thermoplastic members under tension	34
Exa 10.4	Properties of a graphite epoxy reinforce plastic	35
Exa 10.5	Analysis of plastic extruder	36
Exa 10.6	Blow film	37
Exa 10.7	Injection molding of gears	38
Exa 11.1	Particle shape factor determination	39
Exa 11.2	Density of metal powder lubricant mix	40
Exa 11.3	Pressure decay in composition	41
Exa 11.4	Shrinkage in sintering	41
Exa 11.7	Effect of porosity on properties	42
Exa 11.9	Dimensional changes during shaping of ceramic components	42
Exa 12.1	Estimation of welding speed for different materials	44
Exa 12.2	Current in shielded metal arc welding	45
Exa 12.5	Heat generation in resistance spot welding	45

List of Figures

10.1 Analysis of plastic extruder 36

Chapter 2

Fundamentals of the Mechanical Behavior of Materials

Scilab code Exa 2.1 Calculation of ultimate tensile strength

```
// Calculation of ultimate tensile strength
clc
K = 689655  // in kPa
n = 0.5
A0 = 1 // let
printf("\n Example 2.1")
sigma = K*n^n
A_neck = A0*exp(-n)
P= sigma*A_neck
UTS = P/A0
printf("\n True ultimate tensile strength is %.2fkPa
   ",sigma)
printf("\n Engineering UTS of material is %.2f kPa",
   UTS)
// Answer in book is 295521.79 kPa
```

Scilab code Exa 2.3 Calculation of modulus resilience from hardness

```
// Calculation of modulus resilience from hardness
clc
h = 400 // hardness of specimen in HB
E = 205e3 // Youngs modulus of steel in MPa
g = 9.8 // gravitational acceleration in m/s^2
printf("\n Example 2.3")
Y = h*1e6*g/3 //   As, Hardness = c*Y
m_r = (Y/1e6)^2/(2*E) // modulus of resilience

printf("\n Modulus of resilience of body is %.2f Nm/m^3.", m_r)
// while numerical value of answer in book is 4.17
```

Scilab code Exa 2.4 Elimination of stress by tension

```
// Elimination of stress by tension
clc
sigma_t = 140 // in MPa
sigma_c = -140 // in MPa
l = 0.25 // length of specimen in m
Y = 150 // yield stress of material in MPa
E = 70 // Youngs modulus in GPa
printf("\ Example 2.4")
epsilon_tot = (sigma_c*1e6)/(E*1e9)  + Y*1e6/(E*1e9)   // total strain
l_f = l*exp(epsilon_tot)
```

```
printf("\n Stretched length should be %0.4f m",l_f)
// Numerical value of answer in book is 0.2510
```

Scilab code Exa 2.5 Yielding of a thin walled shell

```
// Yielding of a thin walled shell
clc
r = 254 // radius in mm
t = 2.54 // thickness in mm
sigma_1 = 140 // stress in MPa
sigma_2 = 140 // stress in MPa
sigma_min = 0 // stress in MPa
printf("\ Example 2.5")
Y = sigma_2 - sigma_min
p = 2*(t/1e3)*Y/(r*1e-3)
printf("\n\n According to maximum shear stress criterion , Required pressure is %.1f MPa",p)
Y =  sqrt(0.5*(sigma_1^2+sigma_2^2))
p = 2*(t/1e3)*Y/(r*1e-3)
printf("\n\n According to maximum distortion energy criterion , Required pressure is %.1f MPa",p)
```

Scilab code Exa 2.8 Temperature rise in simple deformation

```
// Temperature rise in simple deformation
clc
d = 25 // diameter of cylinder in mm
h_i = 25 // Height of cylinder in mm
```

```
cp = 1255 // specific heat capacity in J/kg.K
rho = 2768 // density in kg
del_t = 55 // temperature change in K
K = 104 // in MPa
n = 0.5
printf("\n Example 2.8")
v = %pi/4*(d*1e-3)^2*h_i*1e-3 // volume of cylinder
H = cp*rho*v*del_t // heat in Joule

epsilon = (H/(v*K*1e6/(n+1)))^(1/(n+1))
h_f = h_i/exp(epsilon)

printf("\n Final height of specimen is %.1f mm",h_f)
```

Chapter 4

Surface Tribology Dimensional Characteristics Inspection and Product Quality Assurance

Scilab code Exa 4.1 Determination of coefficient of friction

```
// Determination of coefficient of friction
clc
h = 20 // height in mm
od_i = 40 // initial outer diameter in mm
id_i = 20 // initial inner diameter in mm
od_f = 50 // final outer diameter in mm
del_l = 40// percentage reduction in length
printf("\n Example 4.1")
h_f = h*(1-del_l/100)
v = %pi/4 * (od_i^2-id_i^2)*h
id_f = sqrt(od_f^2-(4/%pi)*v/h_f)
del_id = (id_f - id_i)/id_i *100

printf("\n For a change of %d %% in length and %.1f
    %% in ID, \n By interpolation from figure, \n\n
    mu is 0.03 and m is 0.11",del_l,del_id)
```

Scilab code Exa 4.2 Adhesive wear in sliding

```
// Adhesive wear in sliding
clc
v = 1 // wear volume in mm^3
k = 1e-2 // from table
W = 100 //load in kg
p = 150 // hardness in HB
printf("\n Example 4.2")
L = 3*v*p/(k*W)
printf("\n Distance traveled is %d mm.",L)
```

Chapter 5

Metal Casting Processes and Equipment Heat Treatment

Scilab code Exa 5.1 Determining the amount of phases in carbon steel

```
// Determining the amount of phases in carbon steel
clc
m = 10 // mass in kg
t1 = 1173 // temperature in kelvin
t2 = 1001 // temperature in kelvin
t3 = 999 // temperature in kelvin
c_gamma1 = 0.77 // from table for t2
c_o = 0.4// from table
c_a = 0.022// from table
c_gamma2 = 6.67// from table for t3
printf("\n Example 5.1")

per_gamma = 100*((c_o-c_a)/(c_gamma1-c_a))
printf("\n %% alpha is : %.1f%% \t %% gamma is : %0
    .1f%%",per_alpha, per_gamma)
```

```
printf("\n Mass of alpha is : %.1f kg \t mass of gamma is : %.1f kg",per_alpha*m/100, per_gamma*m/100)
// while alpha percentage is 50 and gamma percentage is 50
printf("\n\n Part C:")
per_alpha = 100*((c_gamma2-c_o)/(c_gamma2-c_a))
printf("\n %% alpha is : %d%% ",per_alpha)
printf("\n Mass of alpha is : %.1f kg ",per_alpha*m/100 )
```

Scilab code Exa 5.2 Design and analysis of sprue for casting

```
// Design and analysis of sprue for casting
clc
Q = 1.667e-4 // discharge in m^3/sec
d = 20 // diameter of sprue in mm
h = 200 // height of sprue in mm
g = 9.81 // acceleration due to gravity in m/s^2
p = 2700 // density in kg/m^3
neeta = 0.004 // viscosity coefficient

printf("\n Example 5.2")
A1 = %pi/4*(d*1e-3)^2
v1 = Q/A1
v2 = sqrt((h*1e-3)*2*g+v1^2)
A2 = Q/v2^2
D = sqrt(4/%pi * A2)
Re = v2*D*p/neeta

printf("\n Resultant velocity is %.2f m/sec \n Reynolds number is %d",v2,Re)
// answers in book are as velocity: 1.45 m/sec and
```

```
Reynolds number: 11745
```

Scilab code Exa 5.3 Solidification time for various solid shapes

```
// solidification time for various solid shapes
clc
n = 2
v = 1 // let
printf("\n Example 5.3")
A_cube = 6*(v^(1/3))^2// surface area of cube
A_cylinder = 6*%pi*((v/(2*%pi))^(1/3))^2 //surface area of cylinder

A_sphere = 4*%pi*((((3*v)/(4*%pi))^(1/3))^2)
K1 = 1/(A_sphere)^2 // proportional solidification time for sphere
K2 = 1/(A_cube)^2// proportional solidification time for cube
K3 = 1/(A_cylinder)^2// proportional solidification time for cylinder
printf("\n Respective time periods are as:")
printf("\n t_sphere: %.3fC \t t_cube = %.3fC \t t_cylinder = %.3fC",K1,K2,K3 )
```

Chapter 6

Bulk deformation Processes

Scilab code Exa 6.1 Calculation of upsetting force

```
// Calculation of upsetting force
clc
d1 = 200 // diameter in mm
h1 = 125 // height in mm
h2 = 50 // height in mm
K = 760 // in MPa
n = 0.19
mu = 0.2 // coefficient of friction
printf("\n Example 6.1")
epsilon1 = log(h1/h2)
Yf = K*epsilon1^n
v = %pi/4*d1^2*h1
r2 = sqrt(v/(%pi*h2))

P_av= Yf*(1+(2*mu*r2/(3*h2)))
F = P_av*1e6*%pi*(r2*1e-3)^2
printf("\n Required upsetting force is %.2e N",F)
// Answer in book is 8.32e7N
```

Scilab code Exa 6.4 Power required for rolling

```
// Power required for rolling
clc
t1 = 20 // initial thickness in mm
t2 = 12 // final thickness in mm
R = 300 // roll radius
N = 100 // rpm of roll
w = 250 // width in mm
K = 895 // in MPa
n = 0.49 // from table
mu = 0.1 // frictional coefficient
printf("\n Example 6.4")
L = sqrt((R*1e-3)*(t1-t2)*1e-3)
epsilon = log(t1/t2)
Y_bar = K*epsilon^n/(1+n)
Y_bar_1 = Y_bar*(1+(mu*L/((t1+t2)*1e-3)))
F = L*w*Y_bar_1*1e3
p = 2*%pi*F*L*N/60000

printf("\n Power required for rolling is %d kW.",p)
// Answer in book is 3111kW
```

Scilab code Exa 6.6 Force in hot extrusion

```
// Force in hot extrusion
clc
D = 150 // initial diameter in mm
```

```
H = 300 // height in mm
v = 330 // velocity in m/sec
