Book Description

Title: Basic Electrical And Electronics Engineering

Author: B. R. Patil

Publisher: Oxford University Press, New Delhi

Edition: 1

Year: 2011

ISBN: 978-0-19-807701-5

Scilab numbering policy used in this document and the relation to the above book.

Exa Example (Solved example)

Eqn Equation (Particular equation of the above book)

AP Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

Contents

List of Scilab Codes

Chapter 1

DC Circuits

Scilab code Exa 1.1 Resistance of Copper coil at 0 deg C

```
alpha0=0.0043;                    //Assigning values to the parameters
t=50;
R0=40;
R50=R0*(1+0.0043*50);             // Calculating the risistance at 50 deg C
disp(R50,"Resistance at 50 deg C");
```

Scilab code Exa 1.2 Temperature coefficient and resistance of field winding

```
R18=12.7;                                  //Assigning values to the parameters
R50=14.3;
t1=18;
t2=50;
alpha0=(R50-R18)/(t2*R18-t1*R50);
alpha18=alpha0/(1+t1*alpha0);
```

```
R0=R18/(1+t1*alpha0);                    // Calculating resistance at 0 deg C
disp(alpha0,"Temperature coefficient at 0 deg C");
disp(alpha18,"temperature coefficient at 18 deg C");
disp(R0,"Resistance at 0 deg C");
```

Scilab code Exa 1.3 Resistance at 60 deg C of aluminium wire

```
alpha20=0.00403;                         //Assigning values to the parameters
t1=20;
t2=60;
R20=28.3;
R60=R20*(1+alpha20*(t2-t1));             // Calculating value of resistance at 60 deg C
disp(R60,"Resistance at 60 deg C is");
```

Scilab code Exa 1.4 Resistance at 50 deg C of shunt winding of motor

```
R15=80;                     //Assigning values to the parameters
alpha0=0.004;
t1=15;
t2=50;
R0=R15/(1+alpha0*t1);       // Calculating resistance at 0 deg C
R50=R0*(1+alpha0*t2);       // Calculating resistance at 50 deg C
disp(R0,"Resistance value at 0 deg C");
disp(R50,"Resistance value at 50 deg C");
```

Scilab code Exa 1.5 Temperature coefficient of material

```
R10=80;                    //Assigning values to the parameters
R60=96.6;
t1=10;
t2=60;
alpha0=(R60-R10)/(t2*R10-t1*R60);
disp(alpha0,"temperature coefficient at 0 deg C is");
```

Scilab code Exa 1.6 Average temperature

```
t1=20;                    //Assigning values to the parameters
R1=45;
R2=48.5;
alpha0=0.004;
t2=((R2*(1+alpha0*t1))-45)/(alpha0*R1);       //calculating average temperature
disp(t2,"Average temperature of winding at the end of the run when the resistance increases");
```

Scilab code Exa 1.7 Mean temperature

```
t1=20;                                //Assigning values to the parameters
R1=18;
t2=50;
R2=20;
R3=21;
ts=15;
alpha0=(R2-R1)/(t2*R1-t1*R2);
```

```
t=((R3*(1+alpha0*20))-R1)/(alpha0*R1);
disp(alpha0," Temperature Coefficient at 0 deg C");
trise=t-ts;
disp(trise,"mean temperature rise");
```

Scilab code Exa 1.8 To determine current through series connection of resistors

```
R1=5;                        //Assigning values to the
    parameters
R2=7;
R3=8;
Req=R1+R2+R3;                // Calculating equivalent
   resistance
V=100;
I=V/Req;
V1=I*R1;
V2=I*R2;
V3=I*R3;
disp("Volts",V1,"Voltage across 5 Ohm resistor");
disp("Volts",V2,"Voltage across 7 Ohm resistor");
disp("Volts",V3,"Voltage across 8 Ohm resistor");
```

Scilab code Exa 1.9 To determine current and voltage through parallel connection of resistors

```
V=100;                  //Assigning values to the
   parameters
R1=5;
R2=10;
R3=20;
I1=V/R1;
I2=V/R2;
```

```
I3=V/R3;
Itot=I1+I2+I3;          //Calculating total current
disp("Amperes",I1,"Current through 5 Ohm resistor");
disp("Amperes",I2,"Current through 10 Ohm resistor");
disp("Amperes",I3,"Current through 20 Ohm resistor");
disp("Amperes",Itot,"Total current");
P=Itot*V;
disp("Watts",P,"Power drawn from the source");
```

Scilab code Exa 1.10 To find voltage divided among four resistances in series

```
V=100;            // Assigning values to the parameters
R1=5;
R2=10;
R3=15;
R4=20;
Req=R1+R2+R3+R4;   //Equivalent resistance
V1=R1*V/Req;
V2=R2*V/Req;
V3=R3*V/Req;
V4=R4*V/Req;
disp("Ohms",Req,"Equivalent resistance");
disp("Volts",V1,"Voltage across 5 Ohms resistor");
disp("Volts",V2,"Voltage across 10 Ohms resistor");
disp("Volts",V3,"Voltage across 15 Ohms resistor");
disp("Volts",V4,"Voltage across 20 Ohms resistor");
```

Scilab code Exa 1.11 To determine the current divided among three resistors in parallel

```
Itot=12;                //Assigning values to
    parameters
R1=4;
R2=12;
R3=6;
Req=1/((1/R1)+(1/R2)+(1/R3));        //Equivalent
    resistance
V=Itot*Req;
I1=V/R1;
I2=V/R2;
I3=V/R3;
disp("Volts",V,"Potential Difference across the
    parallel circuit");
disp("Amperes",I1,"Current through 4 Ohm resistor")
disp("Amperes",I2,"Current through 12 Ohm resistor")
disp("Amperes",I3,"Current through 6 Ohm resistor")
```

Scilab code Exa 1.12 To calculate value of an unknown resistor and find the power absorbed by the circuit

```
I=5;                //Assigning values to the
    parameters
I1=2;
R2=6;
I2=I-I1;
V=R2*I2;
R1=V/I1;
P=I1*I1*R1+I2*I2*R2;
disp("Ohms",R1,"Value of R1")
disp("Watts",P,"Power absorbed by the circuit")
```

Scilab code Exa 1.13 To calculate the effective resistance of a circuit

```
R1=8;                              // Assigning values to
   resistors
R2=6;
R3=3;
R4=18;
R5=5;
R=1/((1/R2)+(1/R3));          //simplifying the
   network
Rs1=R+R4;
Rs2=1/((1/Rs1)+(1/R5));
Rs3=R1+Rs2;
V=60;
I=V/Rs3;                       // Current through the
   simplified network
disp("Amperes",I,"Current through 8 Ohm resistor");
```

Scilab code Exa 1.14 To find the reading of an Ammeter in the circuit

```
R1=1;                          // Assigning values to
   resistors
R2=2;
R3=1;
R4=1;
R=R3+R4;                      // Simplifying the network
Req=1+(1/((1/R2)+(1/R)));
V=100;
I=V/Req;
I2=I*(R/(R+R2));
disp("Amperes",I2,"Ammeter reading")
```

Scilab code Exa 1.15 To calculate effective resistance

```
R1=1;                  // Assigning values to the
   parameters
R2=5;
R3=4;
R4=8;
R5=6;
R6=2;
R=R1+R2;               //series connection
Ra=R5+R6;
Rb=1/((1/R4)+(1/Ra)) ;
Rc=R3+Rb;
Req=1/((1/R)+(1/Rc));
disp("Ohms",Req,"Effective resistance");
```

Scilab code Exa 1.16 To calculate battery current and effective resistance of the network

```
V=24;                            //Assigning values to
   parameters
R1=4;
R2=8;
R3=6;
R4=12;
Ra=1/((1/R1)+(1/R4));            // Simplifying the
   network
Rb=1/((1/R2)+(1/R3));
Rc=1/((1/Ra)+(1/Rb));
I=V/Rc;
disp("Amperes",I,"Battery current")
```

Scilab code Exa 1.17 To calculate battery current

```
R1=15;                          //Assigning values to
   parameters
R2=6;
R3=30;
R4=3;
R5=4;
V=10;
Ra=R1+R2;                       // Simplifying the
   circuit
Rb=R3+R4;
Rc=1/((1/Ra)+(1/Rb));
Req=Rc+R5;
I=V/Req;
disp("Amperes",I,"Battery current")
```

Scilab code Exa 1.18 To calculate effective resistance

```
R1=15;                              //Assigning
   parameters
R2=6;
R3=4;
R4=30;
R5=3;
Ra=1/((1/R2)+(1/R5));               // Simplifying the
   circuit
Rb=R3+Ra;
Rc=1/((1/R1)+(1/R4));
Req=Rb+Rc;
disp("Ohms",Req,"Effective resistance")
```

Scilab code Exa 1.19 To calculate battery current

```
V=30;                          //Assignign values to
   parameters
Rcf=2;
Ref=2;
Rec=2.4;
Rbc=2;
Rac=4;
Rae=2;
Rab=2;
Rad=2;
Red=1;
Rc=Rab+Rbc;                    // Simplifying the network
Re=Rcf+Ref;
Ra=1/((1/Rac)+(1/Rc));
Re1=1/((1/Re)+(1/Rec));
Ra1=Ra+Re1;
Re2=1/((1/Rae)+(1/Ra1));
Rd=Red+Re2;
Req=1/((1/Rd)+(1/Rad));
I=V/Req;                       // Calculation of battery
    current
disp("Ohms",Req,"Effective resistance")
disp("Amperes",I,"Battery current")
```

Scilab code Exa 1.20 To calculate effective resistance

```
R1=4;                          //Assigning values to
   parameters
R2=6;
R3=8;
R4=2;
Ra=1/((1/R1)+(1/R2));          // Simplifying the
   network
Rb=1/((1/R3)+(1/R4));
Req=Ra+Rb;
```

```
disp("Ohms",Req,"Effective resistance")
```

Scilab code Exa 1.21 To calculate effective resistance

```
R1=5;                         //Assigning values to
   resistors
R2=15;
R3=10;
R4=10;
R5=40;
R6=30;
R7=20;
R8=8;
Rc=R2+R3;                     //Simplifying the network
Re=R4+R5;
Rf=R6+R7;
R=1/((1/Re)+(1/Rf));
Rd=1/((1/R)+(1/Rc));
Req=Rd+R1+R8;
disp("Ohms",Req,"Effective resistance");
```

Scilab code Exa 1.22 To find the value of resistance

```
V=20;                    //Assigning values to
   different parameters
I=1.5;
R1=10;
R2=15;
R3=15;
V10=R1*I;
Vab=V-V10;
I1=Vab/R2;
I2=Vab/R3;
```

```
I3=I-I1-I2;
R=Vab/I3;
disp("Ohms",R,"Value of unknown resistance");
```

Scilab code Exa 1.23 To find the value of resistance

```
P=36;                        //Assigning values to
   different parameters
V=60;
R1=12;
R2=18;
R3=36;
I1=sqrt(P/R1);
V12=I1*R1;
Vr=V-V12;
I2=V12/R2;
I3=V12/R3;
I=I1+I2+I3;
R=Vr/I;
disp("Ohms",R,"Value of unknown resistance");
```

Scilab code Exa 1.24 To find current and voltages

```
R1=4;                        //Assigning values to
   parameters
R2=9;
R3=18;
R4=2;
R5=7;
R6=15;
