Book Description

Title: Introduction To Flight

Author: J. D. Anderson Jr.

Publisher: Tata McGraw - Hill Education, New Delhi

Edition: 6

Year: 2010

ISBN: 978-0-07-070011-6

Scilab numbering policy used in this document and the relation to the above book.

Exa Example (Solved example)

Eqn Equation (Particular equation of the above book)

AP Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

Contents

List of Scilab Codes

List of Figures

Chapter 2

Fundamental Thoughts

check Appendix AP 101 for dependency:

`2_1data.sci`

Scilab code Exa 2.1 Example 1

```
pathname=get_absolute_file_path('2_1.sce')
filename=pathname+filesep()+'2_1data.sci'
exec(filename)
T=p/((density)*(R))
printf("\Answer:\n")
printf("\n\Temperature at that point %f K\n\n",T)
```

check Appendix AP 100 for dependency:

`2_2data.sci`

Scilab code Exa 2.2 Example 2

```
pathname=get_absolute_file_path('2_2.sce')
filename=pathname+filesep()+'2_2data.sci'
```

```
exec(filename)

disp(M,"Mass in Kg",M1,"Mass in pound");
```

check Appendix AP 99 for dependency:

`2_3data.sci`

Scilab code Exa 2.3 Example 3

```
pathname=get_absolute_file_path('2_3.sce')
filename=pathname+filesep()+'2_3data.sci'
exec(filename)
density=P/(R*T);
v=1/density;//specific volume
printf("\Answer:\n")
printf("\n\Density of air: %f Kg/m^3\n\n",density)
printf("\n\Specific volume of air: %f m^3/Kg\n\n",v)
```

check Appendix AP 98 for dependency:

`2_4data.sci`

Scilab code Exa 2.4 Example 4

```
pathname=get_absolute_file_path('2_4.sce')
filename=pathname+filesep()+'2_4data.sci'
exec(filename)
printf("\Answer:\n")
printf("\n\Density of air at the given point: %f Kg/
   m^3\n\n",density)
```

check Appendix AP 97 for dependency:

`2_5data.sci`

Scilab code Exa 2.5 Example 5

```
pathname=get_absolute_file_path('2_5.sce')
filename=pathname+filesep()+'2_5data.sci'
exec(filename)
function[unit]=Conversion(SI)
     unit=(9.8*(0.3048)^2)*(SI)/4.448;
 endfunction
 disp("1lb/ft^2=(9.8*(0.3048)^2)*/4.448)kgf/m^2")
 disp(Conversion(280.8),"wing loading in lb/ft^2 for
    F-117A stealth fighter");
```

---

check Appendix AP 96 for dependency:

`2_6data.sci`

Scilab code Exa 2.6 example 6

```
pathname=get_absolute_file_path('2_6.sce')
filename=pathname+filesep()+'2_6data.sci'
exec(filename)
function[ftPerSecond]=conversion(MilePerHour)
    ftPerSecond=(5280*MilePerHour)/3600;
endfunction
function[meterPerSecond]=conversion1(MilePerHour)
    meterPerSecond=(1609.344*MilePerHour)/3600;
endfunction
disp("1 ftPerSecond=(5280*MilePerHour)/3600")

disp(conversion(60),"velocity in terms of ft/s");

disp("1 meterPerSecond=(1609.344*MilePerHour)/3600")
disp(conversion1(60),"velocity in terms of m/s");
```

Chapter 3

The Standard Atmosphere

check Appendix AP 95 for dependency:

`3_01data.sci`

Scilab code Exa 3.01 Example 1

```
pathname=get_absolute_file_path('3_01.sce')
filename=pathname+filesep()+'3_01data.sci'
exec(filename)
printf("\Answer:\n")
printf("\pressure at an altitude of 14 Km: %f N/m^2\
   n",P2)
printf("\n\density at an altitude of 14 Km: %f Kg/m
   ^3\n\n",D2)
```

check Appendix AP 94 for dependency:

`3_02data.sci`

Scilab code Exa 3.02 Example 2

```
pathname=get_absolute_file_path('3_02.sce')
filename=pathname+filesep()+'3_02data.sci'
exec(filename)
printf("\Answer:\n")
printf("\n\pressure altitude: %f Km\n\n",P1)
printf("\n\ temperature altitude: %f Km\n\n",T1)
printf("\n\density altitude: %f Km\n\n",D1)
```

check Appendix AP 93 for dependency:

3_03data.sci

Scilab code Exa 3.03 Example 3

```
pathname=get_absolute_file_path('3_03.sce')
filename=pathname+filesep()+'3_03data.sci'
exec(filename)
printf("\Answer:\n")
printf("\n\Temperature of air at flying altitude of
    airplane: %f K\n\n",T)
```

check Appendix AP 92 for dependency:

3_04data.sci

Scilab code Exa 3.04 Example 4

```
pathname=get_absolute_file_path('3_04.sce')
filename=pathname+filesep()+'3_04data.sci'
exec(filename)
printf("\Answer:\n")
printf("\pressur altitude: %f Km\n",Hp)
printf("\n\density altitude : %f Km\n\n",Hd)
```

Chapter 4

Basic Aerodynamics

check Appendix AP 91 for dependency:

`4_01data.sci`

Scilab code Exa 4.01 Example 1

```
pathname=get_absolute_file_path('4_01.sce')
filename=pathname+filesep()+'4_01data.sci'
exec(filename)
printf("\Answer:\n")
printf("\n\area of the duct exit: %f m^2\n\n",A2)
```

check Appendix AP 90 for dependency:

`4_02data.sci`

Scilab code Exa 4.02 Example 1

```
pathname=get_absolute_file_path('4_02.sce')
filename=pathname+filesep()+'4_02data.sci'
exec(filename)
```

```
printf("\Answer:\n")
printf("\n\density of air at the duct exit: %f Kg/m
    ^3\n\n",D2)
```

check Appendix AP 89 for dependency:

4_03data.sci

Scilab code Exa 4.03 Example 3

```
pathname=get_absolute_file_path('4_03.sce')
filename=pathname+filesep()+'4_03data.sci'
exec(filename)
disp("P1+(D*V1^2/2)=Pa+(D*Va^2/2)","Bernoulli
    equation");
Va=[(2*(P1-Pa)/D)+(V1)^2]^0.5;disp(Va,"Va=")
printf("\Answer:\n")
printf("\n\velocity at a point A on airfoil: %f m/s\
    n\n",Va)
```

check Appendix AP 88 for dependency:

4_04data.sci

Scilab code Exa 4.04 Example 4

```
pathname=get_absolute_file_path('4_04.sce')
filename=pathname+filesep()+'4_04data.sci'
exec(filename)
printf("\Answer:\n")
printf("\n\pressure at the duct exit: %f N/m^2\n\n",
    P2)
```

check Appendix AP 87 for dependency:

4_05data.sci

Scilab code Exa 4.05 Example 5

```
pathname=get_absolute_file_path('4_05.sce')
filename=pathname+filesep()+'4_05data.sci'
exec(filename)
D=1.067*D*V^2*R;
printf("\Answer:\n")
printf("\n\Aerodynamic force exerted by surface
    pressure distribution: %f N\n\n",D)
```

check Appendix AP 86 for dependency:

4_06data.sci

Scilab code Exa 4.06 Example 6

```
pathname=get_absolute_file_path('4_06.sce')
filename=pathname+filesep()+'4_06data.sci'
exec(filename)
printf("\Answer:\n")
printf("\n\internal energy per unit mass in SI unit:
     %f J/Kg.K\n\n",e)
printf("\n\internal energy per unit mass in English
    enginering unit: %f Ft.Lb/slug\n\n",e1)
printf("\n\enthalpy per unit mass in SI unit: %f J/
    Kg.K\n\n",h)
printf("\n\enthalpy per unit mass in English
    enginering unit: %f Ft.Lb/slug\n\n",h1)
```

check Appendix AP 85 for dependency:

4_07data.sci

Scilab code Exa 4.07 Example 7

```
pathname=get_absolute_file_path('4_07.sce')
filename=pathname+filesep()+'4_07data.sci'
exec(filename)
disp("P2/P1=(T2/T1)^y/y-1","For isentropic flow","
   let P2 be the pressure at that point of wing");
P2=P1*(T/T1)^(y/(y-1));disp(P2,"P2=")
printf("\Answer:\n")
printf("\n\Pressure at this point: %f N/m^2\n\n",P2)
```

check Appendix AP 84 for dependency:

`4_08data.sci`

Scilab code Exa 4.08 Example 8

```
pathname=get_absolute_file_path('4_08.sce')
filename=pathname+filesep()+'4_08data.sci'
exec(filename)
disp("T2=T1*(P2/P1)^((y-1)/y)","from isentropic
   condition:")
T2=T1*(P2/P1)^((y-1)/y)//temperature at exit
printf("\Answer:\n")
printf("\n\Gas temperature at the exit: %f K\n\n",T2
   )
```

check Appendix AP 83 for dependency:

`4_09data.sci`

Scilab code Exa 4.09 Example 9

```
pathname=get_absolute_file_path('4_09.sce')
filename=pathname+filesep()+'4_09data.sci'
exec(filename)
disp("So V1^2=2Cp*(To-T1)","CpTo=CpT1+(V1^2)/2","
   From energy equation:","let V1 be the velocity of
    throat")
