# Book Description

**Title:** Chemistry

**Author:** R. Chang

**Publisher:** Tata McGraw - Hill Education, New Delhi

**Edition:** 9

**Year:** 2009

**ISBN:** 9780070648197

Scilab numbering policy used in this document and the relation to the above book.

**Exa** Example (Solved example)

**Eqn** Equation (Particular equation of the above book)

**AP** Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

# Contents

List of Scilab Codes	5
1 Chemistry The Study of Change	10
3 Mass Relationships in Chemical Reactions	16
4 Reactions in aqueous solutions	28
5 Gases	34
6 Thermochemistry	48
7 Quantum Theory and the Electronic Structure of Atoms	54
11 Intermolecular Forces and Liquids and Solids	58
12 Physical Properties of solutions	62
13 Chemical Kinetics	70
14 Chemical Equilibrium	78
15 Acids and Bases	85
16 Acid Base Equilibria and Solubility Equilibria	97
17 Chemistry in the atmosphere	111
18 Entropy Free Energy and Equilibrium	113

<b>19 Electrochemistry</b>	<b>119</b>
<b>23 Nuclear Chemistry</b>	<b>125</b>

# List of Scilab Codes

Exa 1.1	Computation of density from mass and volume . . . . .	10
Exa 1.2	Computation of mass from density and volume . . . . .	11
Exa 1.3	Conversion among temperature scales . . . . .	11
Exa 1.5	Significant figures . . . . .	12
Exa 1.6	Dimensional Analysis . . . . .	14
Exa 1.7	Dimensional Analysis . . . . .	14
Exa 1.8	Dimensional Analysis . . . . .	15
Exa 3.1	Average Atomic Mass . . . . .	16
Exa 3.2	Computation of number of moles from mass . . . . .	17
Exa 3.3	Computation of mass from moles . . . . .	17
Exa 3.4	Computation of number of atoms from mass . . . . .	18
Exa 3.5	Computation of molecular mass of a compound . . . . .	18
Exa 3.6	Computation of moles from mass of a compound . . . . .	19
Exa 3.7	Computation of number of atoms from mass of a compound . . . . .	20
Exa 3.8	Percentage composition of a compound . . . . .	21
Exa 3.9	empirical formula of a compound from percentage composition . . . . .	21
Exa 3.10	mass of an element in a given compound . . . . .	23
Exa 3.13	mass of an compound produced from certain mass of a given compound . . . . .	23
Exa 3.14	amount of reactants and products . . . . .	24
Exa 3.15	limiting and excess reagent . . . . .	25
Exa 3.16	amount of reactants and products . . . . .	26
Exa 4.6	Computation of mass from concentration and volume . . . . .	28
Exa 4.7	Computation of volume from concentration and mass . . . . .	29
Exa 4.8	Dilution of solution . . . . .	29
Exa 4.9	Gravimetric Analysis . . . . .	30

Exa 4.10	Acid Base Titrations . . . . .	31
Exa 4.11	Acid Base Titrations . . . . .	31
Exa 4.12	Redox Titrations . . . . .	32
Exa 5.1	Pressure Units . . . . .	34
Exa 5.2	Pressure Units . . . . .	34
Exa 5.3	Ideal Gas Equation . . . . .	35
Exa 5.4	Ideal Gas Equation . . . . .	36
Exa 5.5	Ideal Gas Equation . . . . .	36
Exa 5.6	Ideal Gas Equation . . . . .	37
Exa 5.7	Ideal Gas Equation . . . . .	38
Exa 5.8	Density Calculations . . . . .	38
Exa 5.9	Computation of Molar Mass of Gaseous substance . . . . .	39
Exa 5.10	Computation of Molar Mass . . . . .	40
Exa 5.11	Gas Stoichiometry . . . . .	41
Exa 5.12	Gas Stoichiometry . . . . .	41
Exa 5.13	Gas Stoichiometry . . . . .	42
Exa 5.14	Daltons Law of Partial Pressures . . . . .	43
Exa 5.15	Daltons Law of Partial Pressures . . . . .	44
Exa 5.16	Root Mean Square velocity . . . . .	44
Exa 5.17	Gas Effusion . . . . .	45
Exa 5.18	deviation from ideal behaviour . . . . .	46
Exa 6.1	work done by gas . . . . .	48
Exa 6.2	change in energy of a gas . . . . .	49
Exa 6.3	heat produced in a reaction . . . . .	49
Exa 6.4	change in internal energy in a reaction . . . . .	50
Exa 6.5	amount of heat absorbed . . . . .	51
Exa 6.6	calculation of molar heat of combustion . . . . .	51
Exa 6.7	calculation of specific heat . . . . .	52
Exa 6.8	calculation of heat of neutralization . . . . .	53
Exa 7.1	calculation of speed of a wave . . . . .	54
Exa 7.2	calculation of frequency of a wave . . . . .	54
Exa 7.3	calculation of energy of a photon . . . . .	55
Exa 7.4	calculation of wavelength of a photon from an electronic transition . . . . .	56
Exa 7.5	calculation of wavelength of a particle . . . . .	57
Exa 11.3	calculation of atomic radius . . . . .	58
Exa 11.4	diffraction . . . . .	59
Exa 11.6	density of ionic crystals . . . . .	59

Exa 11.7	molar heat of vaporisation . . . . .	60
Exa 11.8	molar heat of vaporisation and overall energy required	61
Exa 12.2	computation of concentration of a solution . . . . .	62
Exa 12.3	computation of molality of a solution . . . . .	62
Exa 12.4	computation of molality from density and molarity . .	63
Exa 12.5	computation of molality from mass percent . . . . .	64
Exa 12.6	computation of solubility of gases in liquid . . . . .	64
Exa 12.7	computation of vapor pressure lowering . . . . .	65
Exa 12.8	computation of freezing point depression and boiling point elevation . . . . .	66
Exa 12.9	computation of molar concentration from osmotic pres- sure . . . . .	67
Exa 12.10	computation of molar mass of a sample from freezing point depression . . . . .	67
Exa 12.11	computation of molar mass of a sample from osmotic pressure . . . . .	68
Exa 12.12	computation of vant hoff factor . . . . .	69
Exa 13.2	computation of reaction rates using stoichiometry . . .	70
Exa 13.3	computation of reaction rates using initial rate data .	71
Exa 13.4	calculations for first order reactions . . . . .	72
Exa 13.5	calculation of rate constant from time and pressure data	73
Exa 13.6	calculation of half life of first order reactions from rate constant . . . . .	74
Exa 13.7	calculation for second order reactions . . . . .	74
Exa 13.8	calculation of activation energy from rate constant and Temperature data . . . . .	75
Exa 13.9	calculation of rate constant at a given temperature . .	76
Exa 14.2	computation of equilibrium constant . . . . .	78
Exa 14.3	computation of component pressure from equilibrium constant . . . . .	79
Exa 14.4	computation of $K_p$ from $K_c$ . . . . .	79
Exa 14.6	computation of $K_p$ and $K_c$ . . . . .	80
Exa 14.8	Predicting the direction of a reaction . . . . .	81
Exa 14.9	computation of equilibrium concentration . . . . .	81
Exa 14.10	computation of equilibrium concentration . . . . .	82
Exa 14.11	Application of Le chateliers Principle . . . . .	83
Exa 15.2	computation of hydronium ion concentration from hy- droxide ion concentration . . . . .	85

Exa 15.3	Computation of pH of a solution from hydronium ion concentration . . . . .	86
Exa 15.4	Computation of hydronium ion concentration from pH . . . . .	86
Exa 15.5	Computation of pH of a solution from hydroxide ion concentration . . . . .	87
Exa 15.6	Computation of pH of solutions for solutions of given concentrations . . . . .	88
Exa 15.8	Computation of pH for weak acid . . . . .	89
Exa 15.9	Computation of ionisation constant from pH of a weak acid . . . . .	90
Exa 15.10	Computation of pH for weak base of given molarity . . . . .	91
Exa 15.11	Computation of concentration of all the species in solution of Oxalic acid . . . . .	92
Exa 15.13	Computation of pH for a solution of salt of weak acid and strong base . . . . .	95
Exa 16.1	Computation of pH using common ion effect . . . . .	97
Exa 16.3	Computation of pH using common ion effect . . . . .	98
Exa 16.5	Computation of pH in a titration of weak acid and strong base . . . . .	100
Exa 16.6	Computation of pH in a titration of weak base and strong acid at equivalence point . . . . .	102
Exa 16.8	Computation of Ksp from solubility . . . . .	103
Exa 16.9	Computation of solubility from Ksp . . . . .	104
Exa 16.10	Predicting precipitation reactions . . . . .	105
Exa 16.11	separation by fractional precipitation . . . . .	106
Exa 16.12	common ion effect and solubility . . . . .	106
Exa 16.14	calculation of Concentration for precipitation . . . . .	107
Exa 16.15	Computation of concentration at complex ion equilibrium . . . . .	108
Exa 16.16	Computation of molar solubility in complex ion solution . . . . .	109
Exa 17.1	computation of wavelength of a photon from energy . . . . .	111
Exa 17.3	Radioactive decay and half life . . . . .	112
Exa 18.2	Entropy changes in the system . . . . .	113
Exa 18.4	free energy changes in the system . . . . .	114
Exa 18.5	entropy changes in the system for phase transitions . . . . .	115
Exa 18.6	computation of equilibrium constant from free energy of a rxn . . . . .	116

Exa 18.7	computation of free energy of a rxn from equilibrium constant . . . . .	117
Exa 18.8	computation of free energy of a rxn from conc of components . . . . .	117
Exa 19.3	computation of standard emf of a cell . . . . .	119
Exa 19.4	computation of equilibrium constant for a reaction . . . . .	120
Exa 19.5	computation of standard free energy change for a reaction . . . . .	120
Exa 19.6	computation of standard free energy change for a reaction . . . . .	121
Exa 19.7	computation of concentration of component from cell potential . . . . .	122
Exa 19.9	quantitative aspects of electrolysis . . . . .	123
Exa 23.2	calculation of nuclear binding energy . . . . .	125

# Chapter 1

## Chemistry The Study of Change

Scilab code Exa 1.1 Computation of density from mass and volume

```
1 // Computation of density from mass and volume
2
3 clear all;
4 clc;
5
6 printf("\t Example 1.1\n");
7
8 m=301;//mass of gold , g
9 v=15.6;// volume of gold , cm^3
10
11 d=m/v;//density of gold , g/cm^3
12
13 printf("\t the density of gold is : %4.1f g/cm^3\n",
14         d);
15
16 //End
```

---

**Scilab code Exa 1.2** Computation of mass from density and volume

```
1 // Computation of mass from density and volume
2
3 clear all;
4 clc;
5
6 printf("\t Example 1.2\n");
7
8 d=13.6; //density of mercury , g/ml
9 v=5.50; // volume of mercury, ml
10
11 m=d*v; //mass of mercury , g
12
13 printf("\t the mass of mercury is : %4.1f g\n",m);
14
15
16 //End
```

---

**Scilab code Exa 1.3** Conversion among temperature scales

```
1 // Conversion among temperature scales
2
3 clear all;
4 clc;
5
6 printf("\t Example 1.3\n");
7
8 //for Solder
9
10 C=224; //melting point of solder , C
11 F=C*9/5+32; //melting point of solder , F
```

```

12
13 printf("\t the melting point of solder is : %4.0f F\n",F);
14
15
16 //for Helium
17
18 F=-452; //boiling point of helium, F
19 C=(F-32)*5/9; //boiling point of helium, C
20
21 printf("\t the boiling point of helium is : %4.0f C\n",C);
22
23
24 //for Mercury
25
26 C=-38.9; //melting point of mercury, C
27 K=C+273.15; //melting point of mercury, K
28
29 printf("\t the melting point of mercury is : %4.2f K\n",K);
30
31 //End

```

---

### Scilab code Exa 1.5 Significant figures

```

1 // Significant figures
2
3 clear all;
4 clc;
5
6 printf("\t Example 1.5\n");
7
8 //(a)
9 A=11254.1; //g

```

```

10 B=0.1983; //g
11 C=A+B; //g
12
13 printf("\t(a) ( %5.1 f + %1.4 f )g = %6.1 f g\n",A,B,C)
    ;
14
15 //(b)
16 A=66.59; //L
17 B=3.113; //L
18 C=A-B; //L
19
20 printf("\t(b) ( %5.2 f - %1.4 f )L = %6.2 f L\n",A,B,C)
    ;
21
22 //(c)
23 A=8.16; //m
24 B=5.1355;
25 C=A*B; //m
26
27 printf("\t(c) %5.2 f m * %1.4 f = %6.1 f m\n",A,B,C);
28
29 //(d)
30 A=0.0154; //kg
31 B=88.3; //mL
32 C=A/B; //kg/mL
33
34 printf("\t(d) %1.4 f kg / %2.1 f mL = %1.2 f *10^-4 kg/
    mL\n",A,B,C*10^4);
35
36 //(e)
37 A=2.64*10^3; //cm
38 B=3.27*10^2; //cm
39 C=A+B; //cm
40
41 printf("\t(e) ( %1.2 f *10^3 + %1.2 f *10^2 )cm = %1.2
    f *10^3 cm\n",A*10^-3,B*10^-2,C*10^-3);
42
43 //End

```

---

**Scilab code Exa 1.6** Dimensional Analysis

```
1 // Dimensional Analysis
2
3 clear all;
4 clc;
5
6 printf("\t Example 1.6\n");
7
8 lb=0.0833; //pound mass, lb
9
10 g=lb*453.6; //pound mass to gram mass, 1lb=453.6g
11
12 mg=1000*g; //gram to milligram
13
14 printf("\t the mass of glucose is : %1.2f *10^4 mg\n
15         ",mg*10^-4);
16 //End
```

---

**Scilab code Exa 1.7** Dimensional Analysis

```
1 // Dimensional Analysis
2
3 clear all;
4 clc;
5
6 printf("\t Example 1.7\n");
7
8 L=5.2; //volume in litres
9
```

```

10 cc=1000*L;//litre to cm^3
11
12 mc=cc/10^6;//cm^3 to m^3
13
14 printf("\t the volume of blood is : %4.1f *10^-3 m
      ^3\n",mc*10^3);
15
16
17 //End

```

---

#### Scilab code Exa 1.8 Dimensional Analysis

```

1 // Dimensional Analysis
2
3 clear all;
4 clc;
5
6 printf("\t Example 1.8\n");
7
8 gpcc=0.808;//density in gram per cm^3
9
10 kgpmc=1000*gpcc;//g/cm^3 to kg/m^3, as 1000g=1kg and
      1cm=10^-2 m
11
12 printf("\t the density of liquid nitrogen is : %3.0f
      kg/m^3\n",kgpmc);
13
14 //End

```

---

## Chapter 3

# Mass Relationships in Chemical Reactions

Scilab code Exa 3.1 Average Atomic Mass

```
1 // Average Atomic Mass
2
3 clear all;
4 clc;
5
6 printf("\t Example 3.1\n");
7
8 Cu63=69.09; //percent of Cu 62.93 amu
9
10 Cu65=30.91; //percent of Cu 64.9278 amu
11
12 AverageAMU=62.93*Cu63/100+64.9278*Cu65/100; //
    average amu
13
14 printf("\t the average atomic mass of Copper is : %4
    .2f amu\n",AverageAMU);
15
16
17 //End
```

---

**Scilab code Exa 3.2** Computation of number of moles from mass

```
1 // Computation of no. of moles from mass
2
3 clear all;
4 clc;
5
6 printf("\t Example 3.2\n");
7
8 mass=6.46; //mass of He, g
9
10 moles=mass/4.003; //no. of moles of He, as mol. mass
    of He is 4.003 amu
11
12 printf("\t the no. of moles of He is : %4.2f mol\n",
    moles);
13
14
15 //End
```

---

**Scilab code Exa 3.3** Computation of mass from moles

```
1 // Computation of mass from moles
2
3 clear all;
4 clc;
5
6 printf("\t Example 3.3\n");
7
8 moles=0.356; //moles of Zn
9
```

```
10 mass=moles*65.39;//mass of Zn, g, 1 mole=65.39 g
11
12 printf("\t the mass of Zn is : %4.1f g\n",mass);
13
14
15 //End
```

---

**Scilab code Exa 3.4** Computation of number of atoms from mass

```
1 // Computation of no. of atoms from mass
2
3 clear all;
4 clc;
5
6 printf("\t Example 3.4\n");
7
8 Na=6.022*10^23;// Avogadro number, atoms/mol
9
10 mass=16.3;//mass of sulfur, g
11
12 moles=mass/32.07;//moles of S
13
14 atoms=moles*Na;//number of atoms of S
15
16 printf("\t the no. of atoms of S is : %4.2f*10^23\n"
17         ,atoms*10^-23);
18
19 //End
```

---

**Scilab code Exa 3.5** Computation of molecular mass of a compound

```
1 // Computation of molecular mass of a compound
```

```

2
3 clear all;
4 clc;
5
6 printf("\t Example 3.5\n");
7
8 MassO=16; //mass of O, amu
9
10 //(a)
11 MassS=32.07; //mass of S, amu
12 MassSO2=MassS+MassO*2; //mass of SO2, amu
13
14 printf("\t the molecular mass of SO2 is : %4.2f amu\n",
    MassSO2);
15
16 //(b)
17 MassN=14.01; //mass of N, amu
18 MassH=1.008; //mass of H, amu
19 MassC=12.01; //mass of C, amu
20 MassC8H10N4O2=8*MassC+10*MassH+4*MassN+2*MassO;
21
22 printf("\t the molecular mass of C8H10N4O2 is : %4.2
    f amu\n", MassC8H10N4O2);
23
24 //End

```

---

### Scilab code Exa 3.6 Computation of moles from mass of a compound

```

1 // Computation of moles from mass of a compound
2
3 clear all;
4 clc;
5
6 printf("\t Example 3.6\n");
7

```

```

8 Mass=6.07; //mass of CH4, g
9 MassC=12.01; //mol. mass of C, amu
10 MassH=1.008; //mol. mass of H, amu
11 MassCH4=MassC+4*MassH; //mol. mass of CH4, amu
12
13 Moles=Mass/MassCH4; //no. of moles of CH4
14
15 printf("\t the no. of moles of CH4 is : %4.3f mol\n"
        ,Moles);
16
17 //End

```

---

**Scilab code Exa 3.7** Computation of number of atoms from mass of a compound

```

1 // Computation of no. of atoms from mass of a
  compound
2
3 clear all;
4 clc;
5
6 printf("\t Example 3.7\n");
7
8 Na=6.07*10^23; // Avogadro number, atoms/mol
9 Mass=25.6; //mass of Urea, g
10 MolMass=60.06; //mol. mass of Urea, g
11 moles=Mass/MolMass; //moles of Urea, mol
12 Atoms=moles*Na*4; //No. of atoms of Hydrogen
13
14 printf("\t the no. of atoms of hydrogen are : %4.2f
        *10^24 atoms\n",Atoms*10^-24);
15
16 //End

```

---

**Scilab code Exa 3.8** Percentage composition of a compound

```
1 //Percentage composition of a compound
2
3 clear all;
4 clc;
5
6 printf("\t Example 3.8\n");
7
8 H=1.008;//molar mass of H, g
9 P=30.97;//molar mass of P, g
10 O=16;//molar mass of O, g
11
12 MolMass=97.99;//mol. mass of H3PO4, g
13 percentH=3*H/MolMass*100;//percent of H
14 percentP=P/MolMass*100;//percent of P
15 percentO=4*O/MolMass*100;//percent of O
16
17 printf("\t the percent by mass of Hydrogen is : %4.3
    f percent\n",percentH);
18 printf("\t the percent by mass of Phosphorus is : %4
    .2f percent\n",percentP);
19 printf("\t the percent by mass of Oxygen is : %4.2f
    percent\n",percentO);
20
21 //End
```

---

**Scilab code Exa 3.9** empirical formula of a compound from percentage composition

```
1 //empirical formula of a compound from percentage
    composition
```

```

2
3 clear all;
4 clc;
5
6 printf("\t Example 3.9\n");
7
8 H=1.008; //molar mass of H, g
9 C=12.01; //molar mass of C, g
10 O=16; //molar mass of O, g
11
12 percentC=40.92; //percent of C
13 nC=percentC/C;
14
15 percentH=4.58; //percent of H
16 nH=percentH/H;
17
18 percentO=54.500; //percent of O
19 nO=percentO/O;
20
21 if(nC>nH) then // determining the smallest subscript
22     small=nH;
