Book Description

Title: Fluid Mechanics For Chemical Engineers

Author: N. D. Nevers

Publisher: Tata McGraw Hill Education, New Delhi

Edition: 3

Year: 2011

ISBN: 978-1-25-900238-0

Scilab numbering policy used in this document and the relation to the above book.

Exa Example (Solved example)

Eqn Equation (Particular equation of the above book)

AP Appendix to Example(Scilab Code that is an Appednix to a particular Example of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

Contents

List of Scilab Codes

Chapter 1

Introduction

Scilab code Exa 1.1 Mass

```
clc
//let the total mass of mud be 100lbm
m_total=100;//lbm
//70% by wt of mud is sand(SiO2)and remaining is
   water
m_sand=0.7*m_total;//lbm
m_water=0.3*m_total;//lbm
rho_sand=165;//lbm/ft^3
rho_water=62.5;//lbm/ft^3
//rho=mass/volume
rho_mud=m_total/((m_sand/rho_sand)+(m_water/
   rho_water));
disp("The density of mud=")
disp(rho_mud)
disp("lbm/ft^3")
```

Scilab code Exa 1.2 Shear stress

```
clc
//Example 1.2
//Calculate the shear stress at the surface of the inner cylinder
D1=25.15//mm
D2=27.62//mm
dr=0.5*(D2-D1)//mm
f=10//rpm
Vo=(%pi)*D1*f/60//mm/s
//Let D denote d/dr
DV=Vo/dr//s^-1
tow=0.005//Nm
L=92.37//mm
s=2*tow/D1^2/(%pi)/L*10^6//N/m^2
printf("The stress at the surface of the inner cylinder is %f N/m^2",s);
```

Scilab code Exa 1.3 Surface tension

```
clc
//problem on surface tension
l=0.10;//m (length of sliding part)
f=0.00589;//N (pull due to 0.6 gm of mass)
f_onefilm=f/2;//N
//surface tension=(force for one film)/(length)
sigma=f_onefilm/l;
disp("The surface tension of fluid is")
disp(sigma)
disp("N/m")
```

Scilab code Exa 1.4 speed conversion

```
clc
```

```
//Example 1.4
//Convert 327 miles/hr into ft/s
V=327//miles/hr
//1 mile = 5280 ft
//1 hour = 3600 sec
V1=V*(5280/3600)//ft/s
printf("327 miles/hr = %f ft/s",V1);
```

Scilab code Exa 1.5 Time conversion

```
clc
//Example 1,5
//Convert 2.6 hours into seconds
t=2.6//hr
//1 hr = 3600 s
t1=2.6*3600//s
printf("2.6 hours = %f seconds",t1);
```

Scilab code Exa 1.6 Acceleration

```
clc
//Example 1.6
//Calculate the acceleration in ft/min^2
m=10//lbm
F=3.5//lbf
//1 lbf.s^2 = 32.2 lbm.ft
//1 min = 60 sec
a=(F/m)*32.2*60^2//ft/min^2
printf("The acceleration provided is %f ft/min^2",a)
    ;
```

Scilab code Exa 1.7 Electrolysis

```
clc
//Example 1.7
//Calculate the wt of metallic aluminium deposited
   in an electrolytic cell
I=50000//Ampere or Coulumbs/sec
//1 hr = 3600 sec
I1=50000*3600//C/hr
//96500 C = 1 gm.eq
//1 mole of aluminium = 3 gm.eq
//1 mole of aluminium = 27 gm
m=I1*(1/96500)*(27/3)/1000//Kg/hr
printf("the wt of metallic aluminium deposited in an
    electrolytic cell is %f Kg/hr",m);
```

Chapter 2

Fluid statics

Scilab code Exa 2.1 Specific weight

```
clc
g=32.2;//ft/s^2
rho_water=62.3;//lbm/ft^3
//specific weoight=(density)*(acceleration due to
    gravity)
specific_wt=rho_water*g;//lbm.ft/ft^3.s^2
//1 lbf=32.2 lbm.ft/s^2
specific_wt=specific_wt/32.2;//lbf/ft^3
disp("Specific weight of water is")
disp(specific_wt)
disp("lbf/ft^3")
```

Scilab code Exa 2.2 Pressure at depth

```
clc
//calc pressure at depth of 304.9m
d=304.9;//m
rho_water=1024;//Kg/m^3
```

```
g=9.81;//m/s^2
p_atm=101.3;//KPa
//gauge pressure=(desity)*(acc. due to gravity)*(
    depth)
p_depth=p_atm+rho_water*g*d/1000;//KPa
disp("pressure at the depth is")
disp(p_depth)
disp("KPa")
```

Scilab code Exa 2.3 Gauge pressure

```
clc
//gauge pressure=(density)*(acc. due to gravity)*(
    depth)
rho_oil=55;//lbm/ft^3
g=32.2;//ft/s^2
d=60;//ft (depth of oil cylinder)
gauge_pressure=rho_oil*g*d/32.2;//lbf/ft^2
disp("Gauge pressure is")
disp(gauge_pressure)
disp("lbf/ft^2")
//1 ft=12 in
gauge_pressure=gauge_pressure/144;//lbf/in^2
disp("Gauge pressure is")
disp(gauge_pressure)
disp("lbf/in^2")
```

Scilab code Exa 2.4 Density of air

```
clc
//calc of density of air at a certain height
p_atm=14.7;//psia
T=289;//K
```

```
//P2=P1*exp^(-(acc. due to gravity)*(mass of air)*(height)/(universal gas const.)/(temp.))
g=9.81;//m/s^2
R=8314;//N.m^2/Kmol/K
//for height of 1000 ft=304.8m
h=304.8;//m
p_1000=14.7*exp(-g*29*h/R/289);
disp("pressure at 1000ft is")
disp(p_1000)
disp("psia")
//for height of 10000 ft=3048m
h=3048;//m
p_10000=p_atm*exp(-g*29*h/R/289);
disp("pressure at 10000ft is")
disp(p_10000)
disp("psia")
//for height of 100000 ft=30480m
h=30480;//m
p_100000=14.7*exp(-g*29*h/R/289);
disp("pressure at 100000ft is")
disp(p_100000)
disp("psia")
```

Scilab code Exa 2.5 Pressure at height

```
clc
//calc pressuer at different heights considering on density change in air
p_atm=14.7;//psia
g=9.81;//m/s^2
//P2=P1*[1-(acc. due to gravity)*(mass of air)*(height)/(univ. gas const.)/(temp.)]
T=289;//K
R=8314//N.m^2/Kmol/K
//for height of 1000ft=304.8m
```

```
h=304.8//m
p_1000=p_atm*[1-g*29*h/R/T];
disp("pressure at 1000ft is")
disp(p_1000)
disp("psia")
//for height of 10000ft=3048m
h=3048//m
p_10000=p_atm*[1-g*29*h/R/T];
disp("pressure at 10000ft is")
disp(p_10000)
disp("psia")
//for height of 100000ft=30480m
h=30480//m
p_100000=p_atm*[1-g*29*h/R/T];
disp("pressure at 100000ft is")
disp(p_100000)
disp("psia")
//NOTE that the pressure comes out to be negative at
    100000ft justifying that density of air changes
   with altitude
```

Scilab code Exa 2.6 Pressure

```
clc
//calc atm pressure on a storage tank roof
p_atm=14.7;//psia
//diameter of roof is 120ft
d_roof=120;//ft
//force=(pressure)*(area)
f_roof=p_atm*(%pi)*d_roof^2/4*144;//lbf ;144 because
    1ft=12inch
disp("Force exerted by atmosphere on the roof is")
disp(f_roof)
disp("lbf")
```

Scilab code Exa 2.7 Pressure

```
clc
//calc atm pressure on a storage tank roof
p_atm=14.7;//psia
//diameter of roof is 120ft
d_roof=120;//ft
//force=(atm. pressure + gauge pressure)*(area)
//gauge pressure=(desity)*(acc. due to gravity)*(
    depth)
rho_water=62.3//lbm/ft^3
g=32.2;//ft/s^2
//depth of water on roof=8 inch=o.667 ft
h=0.667;//ft
gauge_pressure=rho_water*g*h/32.2*(%pi)*d_roof^2/4;
    //lbf
disp(gauge_pressure)
```

Scilab code Exa 2.8 Force

```
clc
//calc the total force on a lock gate
//lock gate has water on one side and air on the
    other at atm. pressure
w=20;//m (width of the lock gate)
h=10;//m (height of the lock gate)
p_atm=1;//atm
rho_water=1000;//Kg/m^3
g=9.81//m/s^2
//for a small strip of dx height at the depth of x
    on the lock gate
```

```
//net pressure on strip = (p_atm+(rho_water)*g*x) - p_atm
//thus, net pressure on strip = (rho_water)*g*x
//force on strip = (rho_water*g*x)*w.dx = (rho_water)*g*w*(x.dx)
//force on lock gate = integration of force on strip fromm h=0 to h=10
//integration(x.dx) = x^2/2
//for h=0 to h=10; integration (x.dx) = h^2/2
force_lockgate=(rho_water)*g*w*h^2/2;
disp("The net force on the lock gate is")
disp(force_lockgate/10^6)
disp("MN")
```

Scilab code Exa 2.9 Thickness

```
clc
//calc thickness of an oil storage
sigma_tensile=20000;//lbf/in^2 (tensile stress is normally 1/4 rupture stress)
//max pressure is observed at the bottom of the storage
p_max=22.9;//lbf/in^2
//diameter of storaeg tank = 120ft =1440in
d=1440;//in
t=(p_max)*d/sigma_tensile/2;//in
disp("Thichness of the storage tank is")
disp(t)
disp("in")
```

Scilab code Exa 2.10 Thickness

```
clc
```

```
//calc thickness of a storage tank

m=q*sg*rho_water//lbm/s
printf("Mass flow rate is %f lbm/s\n",m);
d=1;//in diameter of pipe
a=((%pi)*d^2/4)/144;//ft^2 area of pipe
v_avg=q/a//ft/s
printf("The average velocity is %f ft/s",v_avg);
```

Scilab code Exa 3.5 Velocity and Mass flow rate

```
clc
//Example 3.5
//calculate velocity and mass flow rate of natural in a pipe
d1=2;//ft diameter of pipe at position 1
a1=(%pi)/4*d1^2;//ft^2
v1=50;//ft/s vel of gas at position 1
rho1=2.58;//lbm/ft^3 density of gas at position 1
d2=3;//ft diameter of pipe at position 2
a2=(%pi)/4*d2^2;
rho2=1.54;//lbm/ft^3 density at position 2
v2=(rho1/rho2)*(a1/a2)*v1//ft/s
printf("Velocity is %f ft/s\n",v2);
m=rho1*v1*a1//lbm/s mass flow rate
printf("The mass flow rate is %f lbm/s",m);
```

Scilab code Exa 3.6 Velocity and Mass flow rate

```
clc
//Example 3.6
//calculate the mass flow rate, volumetric flow rate and velocity of waterin a pipe
d1=0.25;//m diameter of pipe at position 1
v1=2;//m/s velocity
rho=998.2;//kg/m^3  density of water
a1=(%pi)/4*d1^2;//m^2
d2=0.125//m diameter of pipe at position 2
a2=(%pi)/4*d2^2;//m^2
m=rho*a1*v1//kg/s mass flow rate
printf("Mass flow rate is %f kg/s\n",m);
q=m/rho//m^3/s volumetric flow rate
printf("The volumetric flow rate is %f m^3/s\n",q);
v2=(a1/a2)*v1//m/s velocity
```

```
printf("Velocity of water is %f m/s",v2);
```

Scilab code Exa 3.7 Time required

```
clc
//Example 3.7
//calulate the time required
p_initial=1;//atm pressure initially
p_final=0.0001;//atm pressure finally
V=10;//ft^3 volume of system
q=1;//ft^3/min vol. flow rate
t=(V/q)*log(p_initial/p_final)//min
printf("The time required is %f min",t);
```

Scilab code Exa 3.8 Steady state pressure

```
clc
//Example 3.8
//calculate the final or steady state pressure in
   tank
m_in=0.0001;//lbm/min
q_out=1;//ft^3/min
rho_sys=m_in/q_out//lbm/ft^3
rho_air=0.075;//lbm/ft^3
p_initial=1;//atm
p_steady=p_initial*(rho_sys/rho_air)//atm
printf("The steady state pressure is %f atm",
   p_steady);
```

Scilab code Exa 3.9 Velocity of rising water

```
clc
//Example 3.9
//calculate how fast the level of water is rising or
    falling in a cylindrical tank
d=3;//m diameter of tank
a=(%pi)*d^2/4;//m^2
d_in=0.1;//m inner diameter of inflow pipe
d_out=0.2;//m
v_in=2;//m/s
v_out=1;//m/s
q_in=((%pi)*d_in^2/4)*v_in;//m^3/s
q_out=((%pi)*d_out^2/4)*v_out;//m^3/s
//let D represent d/dt
DV=q_in-q_out;//m^3/s
if DV>1 then

dPE=m*dpe//kgm^2/s^2 or J change in pot. energy
printf("The total change in potential energy is %f J
   ",dPE);
```

Scilab code Exa 4.2 Kinetic energy

```
clc
//Example 4.2
//calculate the kinetic energy of bullet
m=0.01;//lbm mass of bullet
v=2000;//ft/s
KE=(m*v^2/2)*(1.356/32.2)//J
printf("the kinetic energy of bullet is %f J",KE);
```

Scilab code Exa 4.3 Kinetic energy

```
clc
//Example 4.3
//Calculate the kinetic energy of bullet fired from
    a airplane
v_bp=2000;//ft/s vel of bullet wrt plane
v_p=-1990;//ft/s
v_b=v_bp+v_p//ft/s vel of bullet wrt ground
m=0.01;//lbm
KE=(m*v_b^2/2)*(1.356/32.2)//J
printf("the kinetic energy of bullet fired from a
    airplane is %f J",KE);
```

Scilab code Exa 4.4 Change in internal energy

```
clc
//Example 4.4
//calculate the change in internal energy of the
    system
p=14.7;//lbf/in^2 atmospheric pressure
dV=1;//ft^3 change in volume
dW=p*dV*(144/778)//Btu work done
dQ=-42;//Btu heat removed from the system
```

```
dU=dQ-dW//Btu change in internal energy of the system
printf("the change in internal energy of the system is %f Btu",dU);
```

Scilab code Exa 4.5 Work

```
clc
//Example 4.5
//calculate the work done
//work done=change in pot. energy + change in kinetic energy considering steady flow and adiabatic conditions
v_in=3;//m/s
v_out=10;//m/s
dke=(v_in^2-v_out^2)/2;//m^2/s^2
g=9.81;//m/s^2
dh=15;//m change in height in inlet and outlet
dpe=g*dh;//m^2/s^2
W=dpe+dke//J/kg
printf("The work done is %f J/Kg",W);
```

Scilab code Exa 4.6 Mass consumed in nuclear reactor

```
clc
//Example 4.6
//calculate the mass consumed in a nuclear reactor per unit time
//let D=d/dt
DQ=-13*10^8;//J/s
DW=7*10^8;//J/s
//Dm=(DQ-DW)/c^2 where c is velocity of light sice E=mc^2
```
